EDUCATION

UC San Diego

Major: Data Science

GPA: 3.925

Relevant Coursework: Principles of Data Science (DSC 10), Advanced Python Programming, Multivariable Calculus

San Diego, CA

Expected June 2028

EXPERIENCE

Undergraduate Researcher

October 2025 – present

Data Science Teaching and Learning Lab @ UC San Diego

San Diego, CA

- Developing ChatSight, an online tool assisting instructors in analyzing AI tutor chat logs for student confusion, frustration, etc. (PI: Professor Sam Lau, collaborated with a team of 4 researchers)
- Created a Figma to model UI
- Aided in executing a seamless frontend using React (TypeScript) and CSS, Python backend services
- Applied regular expressions to normalize multiple .txt formats into a clean, standardized file suitable for parsing and content extraction
- Preparing submission to UIST conference

Supporting Projects

- * Built full-stack prototypes using Flask, SQLite, and RESTful APIs with persistent data storage.
- * Developed frontend components using HTML, CSS, JavaScript, and React (TypeScript).
- * Integrated an LLM API to build a custom chatbot

Pathology Lab Assistant

June 2025 – Sep 2025

Pacific Rim Pathology Medical Group

San Diego, CA

- Accessioned patient samples (Pap tests, bodily fluids, etc.) for HPV, Chlamydia Trachomatis (CT) / Neisseria Gonorrhoeae (NG), and Trichomoniasis tests
- Prepared stained, and processed cytology slides for microscopic evaluation

Research Intern

June 2024 – Oct 2024

Trutino Biosciences

San Diego, CA

- Compiled, cleaned, and visualized pre-clinical, toxicity data for an immunotherapy lead molecule that was approved for a Phase 1 Clinical Trial
- Used Excel and GraphPad Prism to organize and analyze clinical chemistry, ELISA, and flow cytometry data

Research Experience for High School Students (REHS)

June 2024 – Aug 2024

UC San Diego

San Diego, CA

- Worked with a UCSF mentor to create a research project, conduct computational experiments, and present a poster at the REHS Poster Showcase 2024
- Trained and tested SGD machine learning model using WEKA (Waikato Environment for Knowledge Analysis) with 92.4% accuracy
- Poster: Improving Cancer Patients' Outcomes Using PD-1 / PD-L1 miRNAs and Machine Learning

PROJECTS

AI Math Tutor | *Python, Flask, REST API, HTML*

May 2025 – June 2025

- Built an interactive AI math tutoring tool prompting users for a math problem, providing step-by-step instructions, and offering the option for a practice quiz testing their knowledge on similar concepts
- Developed a Flask web application integrating an API (following RESTful principles) to generate step-by-step instruction and similar quiz questions
- Implemented HTML code for frontend, route-driven navigation, session storage

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript

Libraries: Pandas, NumPy, Matplotlib, React

Technical Skills: GitHub, Machine Learning, NLP, Hypothesis Testing, LLM APIs, REST, Data Cleaning, Data Wrangling
