EDUCATION

University of Maryland

B.S. in Computer Science — Presidential Scholarship Recipient

Relevant Coursework: Object Oriented Programming II, Applied Probability and Statistics

College Park, MD

Expected Grad: May 2029

Mission College

Dual Enrollment

Relevant Coursework: Python Programming, Web Design & Development, Database Management I, Machine Learning

Santa Clara, CA

Aug. 2021 – June 2025

EXPERIENCE

Software Engineering Intern

April 2024 – August 2025

Cheffy (Food Tech Startup)

San Francisco, CA

- Designed Firebase schema and ESP32 firmware hooks for an automated egg-cooking appliance to log pan temp, heat times, ambient temp, motor force, and power data in real time, enabling root-cause analysis of previously untracked cook failures.
- Built observability into prototypes to capture temperature/performance metrics end-to-end, increasing testing efficiency by 15% and reducing egg-yolk breakage during operation by 25%.
- Coordinated with mechanical/electrical teammates and led 4 interns through five prototype cycles, aligning firmware changes with hardware tolerances to stabilize the egg-cracking mechanism.
- Manufactured 100+ precision aluminum components on a CNC mill and iterated designs to remove mechanism inconsistencies, lowering material costs by 20%.

Software Engineering Intern

June 2023 – August 2023

Humans In Space

San Francisco, CA

- Doubled real-time motion analysis from 30 to 60 FPS by integrating MediaPipe/OpenPose and optimizing keypoint-extraction pipelines.
- Implemented facial-recognition-based patient ID and session continuity, achieving 98% match accuracy and eliminating manual re-entry.
- Streamlined video/image ingestion and pre/post-processing (buffering, resize, normalization) to stabilize inference and smooth CPU spikes.
- Co-authored wireframes and ran design reviews with clinicians, saving 3 hours of back-and-forth per client before demo builds.

PROJECTS

Scribe | *Python, Flask, BeautifulSoup, OpenAI, Firebase, Next.js, DigitalOcean*

June 2023 – Present

- Built a full stack cold-outreach platform generating 10,000+ personalized research-position emails
- Designed a Flask API with OpenAI + Google Custom Search and stored outputs in Firebase Firestore
- Queued generation in Next.js to serialize requests with automated deploys via GitHub Actions to DigitalOcean
- Implemented Google OAuth and dashboard with Firestore listeners, serving 125 users

Docket | *Claude Computer-Use, Flask, PyAutoGUI, Docker*

June 2025

- Built a Claude Computer-Use agent that turns natural-language requests into JSON APIs for any website
- Developed with Flask 3.0 (Docker) and PyAutoGUI, producing live JSON APIs from pages in <30 seconds
- Implemented a two-stage LLM pipeline with a retry loop that hot loads Flask routes and updates Swagger docs

Populus | *SentenceTransformer, FAISS, Flask, Next.js, Mapbox*

November 2024

- Developed an agentic human simulator that embodies Berkeley personas and maps their schedule on a 3D Mapbox campus
- Generated realistic agendas with GPT-4o-mini, then grounded activities using SentenceTransformer embeddings and a FAISS index of 1.5k places
- Built a Flask API returning JSON itineraries with coordinates, waypoints and pop-ups, and a Next.js UI rendering routes with interactive markers

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, HTML/CSS, C/C++, SQL

Frameworks: Flask, Next.js, Node.js, PyAutoGUI, SentenceTransformer, FAISS, BeautifulSoup, MediaPipe, OpenPose
