EDUCATION

University of California, San Diego

B.S. Computer Science

Relevant coursework: Advanced Datastructures, Intro to parallel computing,

Computer Organization, Systems Programming and Software Tools, Design and Analysis of Algorithms

San Diego, CA

Sep 2024 – June 2028

ACHIEVEMENTS

UCSD SMASH and NSF HDR Hackathon Winner

Jan 2026

- Received 2nd Place for the Neural Forecasting Track where we developed a solution for neural activity forecasting by predicting future signals using the previous 10 time steps.

PROJECTS

SnapChef | *Devpost*

Feb 2026

- Integrated multi-modal ingredient extraction (image + text) and downstream recipe reasoning, supporting real-time camera input, receipt OCR fallback, YouTube-sourced cooking references, and secure Google OAuth authentication
- Integrated **LLM-driven reasoning** (Ollama and Gemini) to generate recipes, estimate nutritional information, and prioritize ingredients by freshness likelihood, reducing manual user decision-making steps by **40%**

Neural Time Series Forecasting LSTM Model | *GitHub*

Jan 2026

- Built and trained a **4-layer LSTM** model with PyTorch to predict the **next timesteps of neural activity from the previous timesteps** using real research-grade neural data
- Evaluated model performance with a **mean square error score of 53,000**
- Worked with high-dimensional **time-series data** across dozens of **neural channels and 9 features per channel**, requiring careful reshaping and normalization

GPU matrix multiplication with OpenCL | *C, OpenCL, Parallel Programming*

Jan 2026

- Built GPU-accelerated transposed matrix multiplication using **OpenCL with 2D work-item grids, tiling and row-wise coarsening**, achieving **sub-500 ms** execution on large input on **Nvidia 1080 Ti GPU and Qualcomm Adreno GPUs**
- Wrote **host-side C code** and device-side **OpenCL kernels**, managing the full execution pipeline including memory transfers, kernel configuration, and execution

LEADERSHIP

Orientation Leader

Apr 2025 – Dec 2025

University of California, San Diego

San Diego, CA

- Engaged groups of **15 first-year and transfer students** to address concerns about transitions to college
- Facilitated complex dialogue, in person, with sensitive and vulnerable identity spaces for incoming students to foster a sense of community
- Collaborated with** orientation leaders and supervisors to implement college's orientation goals

Peer Mentor for Global Ambassadors Program

June 2025 – Sep 2025

University of California, San Diego

San Diego, CA

- Guided **multiple incoming international students** to smoothen their transition to UC San Diego's college life and enhance their sense of belonging at the college
- Introduced students to campus resources that will assist in their academic, personal and professional success
- Encouraged students to develop intercultural communication skills and foster global understanding in their community

TECHNICAL SKILLS

Languages: Java, Python, C/C++, JavaScript, HTML/CSS

Frameworks: React, Node.js, Flask, JUnit, PyTorch, FastAPI

Developer Tools: Git, Docker, VS Code, Visual Studio,

Libraries: Tensorflow, Pandas, NumPy, Matplotlib
