EDUCATION

University of California, San Diego

La Jolla, CA

Bachelor of Science in Computer Science

Expected Graduation June 2027

- Relevant Coursework: Computer Systems, Assembly, C Programming, Discrete Math, Linear Algebra, Data Structures & Algorithms, Computer Architecture, Software Engineering, Deep Learning, Algorithm Design and Analysis

EXPERIENCE

Vice President

January 2026 – Present

Google Developer Group at UC San Diego

La Jolla, CA

- Co-founding and operationalizing UCSD's Google Developer Group chapter, designing the technical roadmap focused on AI, ML, and full-stack engineering initiatives
- Leading recruitment and evaluation of founding engineering board members while establishing internal collaboration systems using GitHub, CI workflows, and structured project standards
- Partnering with Google engineers and Developer Relations teams to organize hands-on workshops and hackathons leveraging Google Cloud, Firebase, and Gemini

AI Researcher

June 2025 – September 2025

Keywords Studios

San Francisco, CA

- Contracted by a FAANG company (NDA) to test and evaluate 1000+ AGI agent model runs, performing detailed chain-of-thought and reasoning analysis as the agent completed multi-step tasks and website interactions
- Authored 12+ research reports highlighting 30+ unique reasoning and decision-making failures in agent behavior; collaborated with 5+ senior AI researchers to iterate on agent prompt engineering and improve autonomous task execution and safety

Founding Engineer

May 2025 - Present

SVAD, LLC.

Fremont, CA

- Developing a Python-based stock trading algorithm, incorporating Pandas, NumPy, PyTorch, and Matplotlib for data handling, model development, and visualization. Utilized Yahoo! Finance data to analyze RSI divergence and generate buy/sell signals alerts.

Software Engineer Fellow

December 2024 – February 2025

Palantir Technologies

Remote

- Completed a 6-week immersive program learning the Palantir Foundry and Artificial Intelligence Platform (AIP), working hands-on with sample data pipelines and LLM workflows.
- Built and tested 3+ end-to-end analytics workflows integrating Foundry and LLM tools to process, analyze, and visualize large data sets while documenting solutions

PROJECTS

GestureBrass - Real Time Virtual Trumpet using CV | *Python, OpenCV, MediaPipe, PyTorch, MIDI (in development)*

- Designing a cross-platform system that leverages real-time webcam hand tracking to map right-hand finger positions to trumpet valve states and left-hand gestures to dynamic volume, using deep hand pose estimation.
- Currently developing and testing core computer vision and MIDI integration modules.

Parallax for Prediction Markets (In Development) | *Python, PyTorch, FastAPI, PostgreSQL, NumPy, C++, Docker*

- Architecting the foundational data pipeline for a prediction-market analytics platform, ingesting live market data and constructing market-specific historical baselines for anomaly detection.
- Developing feature engineering modules to quantify sequencing patterns, price impact efficiency, liquidity regimes, and cross-market inconsistencies for statistical signal generation.

TECHNICAL SKILLS

Languages: Python, C/C++, JavaScript, SQL, Assembly

Frameworks/Tools: Next.js, Node.js, TypeScript, Git, Linux, VS Code, Figma

Libraries: Pandas, NumPy, Matplotlib, PyTorch

Cloud/Platforms: Vercel, Google Cloud Platform, GitHub Actions
