EDUCATION

Halicioğlu Data Science Institute, University of California San Diego

San Diego, CA

B.S. in Data Science, B.S. in Mathematics

2025 – 2029

Major GPA: 4.0 / 4.0 Cumulative GPA: 3.925 / 4.0

Provost Honors (Dean's List)

EXPERIENCE

Data Science Intern

Jul – Aug 2025

Evoastra Ventures Pvt. Ltd.

- Built a CNN-LSTM image captioning system in Python on MS COCO, improving BLEU through loss and architecture tuning.
- Prepared large image and text datasets (normalization, tokenization, padding) for stable training.
- Reduced overfitting using validation curves, dropout, and small hyperparameter sweeps.

Research & Development Intern

Aug – Oct 2024

Valeo Ind. Pvt. Ltd.

- Analyzed sales time-series from 200+ retailers using Python and SQL to study demand patterns.
- Built simple forecasting baselines to compare short-term predictions.
- Summarized results in automated weekly reports for management review.

Machine Learning Intern

May – Jul 2024

JP Motors Ltd.

- Built SKU-level demand forecasts using Python on multi-year sales data to support purchasing plans.
- Studied seasonality and pricing effects using regression and time-series analysis.
- Cleaned and validated datasets using SQL to analyze workflows across 30+ retail firms.

Researcher – Convolutional Neural Networks

Nov 2024 – Aug 2025

University of Pennsylvania

- Conducted applied research on CNNs and transformers for multilingual vision tasks with Dr. Yifei Shao, PhD student at University of Pennsylvania.
- Co-authored “Automated Multi-Class Crop Pathology Classification via CNNs,” published on arXiv: 2507.09375.
- Focused on model robustness, interpretability, and deployment in real-world settings.

PROJECTS

CNN-based Asset Volatility Prediction Model | *Python, CNNs, LSTMs*

Nov 2025 – Present

- Built a neural network to predict short-term stock volatility on NIFTY 50 and S&P 500 data.
- Used price and volume time series as inputs for CNN and LSTM networks.
- Tested predictions by backtesting strategies on QuantConnect.
- Worked in a team of four and wrote a research report on the results.

Sylvasynth (Agritech Startup) | *Python, TensorFlow, Keras, CNNs*

Jun 2024 – Aug 2025

- Built a CNN-based crop disease detector with 94.43% accuracy on 250K+ images.
- Cleaned and prepared large image datasets for training.
- Deployed the system for use by 50+ farmers across 4 countries.
- Selected as a Top 32 finalist among 20K+ startup ideas; research published on SSRN: 5190303.

TECHNICAL SKILLS

Languages: Python, C++, SQL (MySQL), JavaScript, HTML/CSS, R, MATLAB

Libraries: pandas, NumPy, Matplotlib, TensorFlow, Keras, scikit-learn

Concepts: Probability, Time-Series Analysis, Regression, Backtesting, CNNs, LSTMs

Developer Tools: Git, Jupyter Notebook, VS Code, QuantConnect, Yahoo Finance, Interactive Brokers TWS
