EDUCATION

University of California, San Diego

Bachelor of Science in Data Science, Minor in Cognitive Science
Provost's Honors

San Diego, CA

Aug. 2023 – May 2027

PROJECTS

Exploring Urban Heat Island Effect | *JavaScript, Python, Git*

Nov. 2025 – Dec. 2025

- Explored urban heat patterns to find their relation to vegetation and land cover in a group of 4
- Processed GeoTIFF and GeoJSON data into JSON with Python and visualized results with Mapbox and scatterplots using D3
- Visualization conveys how more vegetation facilitates cooling and reduces urban temperature during both day and night
- Won a honorable mention for Best Project in a class of 300 students

Mushroom Classification | *Python, Colab*

Nov. 2025 – Dec. 2025

- Determined the degree of success a Bayesian model could predict mushroom toxicity in a UCI dataset in group of 4
- Trained Bayesian models with latent nodes with the EM algorithm, building up via most correlated columns due to memory constraints, after dropping the most correlated column
- Final model was able to achieve 100% recall using 11 features, which was not achieved by similar models without latent nodes tested by groupmates

FoodTok's Influence on Google Trends | *Python, Jupyter Notebook, Git*

Oct. 2025 – Dec. 2025

- Explored possible correlation between viral TikTok food content and Google search trends in group of 5
- Investigated multiple datasets, features, and trends to find one suitable for the project
- Performed EDA with pandas, seaborn, and matplotlib for both univariate and bivariate feature combinations
- Figured out analysis process and delegated work accordingly; scraped Google search trends using Pytrends and processed results into investigable data, learned of no correlation

Reddit Karma Analysis | *Python, Git*

Apr. 2025 – Oct. 2025

- Investigated trends in the karma of Reddit users to find whether their comments can help predict user karma
- Scraped 30000 Reddit accounts along with a selection of their comments using PRAW
- Applied sentiment analysis to comments using nltk and conducted EDA both univariately and bivariate
- Engineered qualitative features into quantitative ones, and trained various predictive models to model factors influencing user karma
- K-means clustering achieved the best results, with a coefficient of determination of 0.27, increased to 0.37 when considering only 75% of the dataset

Power Outage Cause Analysis | *Python, Git*

May 2025 – Jun. 2025

- Investigated large-scale outage datasets to identify trends in outage causes, duration, and geography
- Conducted univariate and bivariate EDA as well as permutation and missingness testing on data
- Trained predictive models, with a Random Forest achieving the best performance for cause prediction

Minigit | *Java, Git*

Jun. 2024 – Feb. 2025

- Implemented a simplified Git-like version control system supporting staging, commits, branches, checkout, and logs

EXPERIENCE

Mentor

Sept. 2025 – Jul. 2026

Mentor Collective

Remote

- Mentored UCSD students by providing guidance on coursework, campus resources, and academic planning

TECHNICAL SKILLS

Languages: Python, Java, SQL, JavaScript, MATLAB, LaTeX, HTML, CSS

Developer Tools: Git, VS Code, IntelliJ, PostgreSQL, Jupyter Notebooks, Google Colab

Libraries: pandas, numpy, matplotlib, seaborn, scikit-learn, nltk, geopandas, pgmpy, D3, LangChain, LangGraph, Qdrant
