

SUMMARY

Languages: Python, Java, C++, JavaScript, HTML
Tools/Frameworks: Flask, React.js, Node.js, Git, CMake, ExpoGo

EDUCATION

 **University Of Iowa (Aug 2023 - May 2027)** Iowa City, IA

Bachelor's Of Computer Science & Engineering (B.S.E)

- Coursework: Algorithms, Data Structures, AI Machine Learning, Generative AI Tools, Software Design

EXPERIENCE

 **Startup Frontend Developer Intern, [Redacted]** Oct 2024 - Jan 2025

- Helped build a location-based parking garage app that enables users to view, reserve, and navigate to available parking spots in real time.
- Developed interactive geospatial features using React and Leaflet.js, integrating real-time availability data with dynamic UI components.

 **Coding & Technology Educator, [Redacted]** Jun 2024 - Aug 2024

- Created and taught engaging block-based coding lessons using platforms like Scratch and iPad compatible tools, tailored for students aged 8–12 from underserved communities.
- Guided students through hands-on STEAM projects involving game design, basic robotics, drone piloting, and interactive animations.

 **Operations & Payroll Systems Automation, [Redacted] Inc.** Apr 2021 - Sep 2021

- Exported and processed payroll data in CSV format; developed Excel-based automation tools (formulas, pivot tables, macros) to streamline reporting and reduce manual effort.
- Currently developing a custom internal software solution to manage trucking operations, including automated tracking of vehicle repairs, load assignments, and maintenance schedules—aimed at improving efficiency and reducing operational overhead.

 **Digital Operations [Redacted]** Apr 2022 - Oct 2022

- Developed and maintained an interactive website to streamline client communication and engagement, using modern web platforms.
- Managed digital invoicing, payment processing, and customer inquiries, ensuring seamless financial transactions and client satisfaction.

TECHNICAL PROJECTS

WealthSync

React.js, Node.js, TSX, Expo Go, Clerk, Deepseek AI API

- Designed and developed WealthSync, a full-stack mobile app enabling users to securely connect and visualize all financial accounts (e.g., Chase, Robinhood, cash, investments) in one unified dashboard using OAuth 2.0 via Clerk.
- Integrated DeepSeek AI to provide personalized investment insights, market analysis, and portfolio recommendations, combining real-time financial data with intelligent feedback for enhanced user decision-making.

Blockchain Explorer & Arbitrage

Python, Flask, HTML

- Developed a web application using React.js, Python and Flask that allows users to explore crypto currency's real time blockchain volume, exchange prices, and news.
- Implemented an arbitrage feature by scraping multiple exchange APIs to identify and highlight profitable trading opportunities across different cryptocurrencies.

Stock Sim

React.js, Python, HTML

- Created a stock market simulation and analysis platform using React and Python, enabling users to simulate trading strategies and analyze stock performance with interactive visualizations
- 10 day forecast of highly likely price points for all stocks
