EDUCATION

- University of [REDACTED]** [REDACTED]
Bachelor of Science, Computer Science *Expected Graduation May 2028*
- [REDACTED] Community College** [REDACTED]
Associate's of Science, Computer Science *Expected Graduation May 2026*
- Related Coursework: Data Structures & Algorithms, Discrete Mathematics, Computing in C++, Linear Algebra

EXPERIENCE

- Web Developer and Designer** January 2024 - Present
[REDACTED]
- Led development of client-facing intake systems at a digital agency, building **Vue 3** and **Tailwind CSS** applications handling **~50 requests/month** with validated, conditional forms, reducing manual entry by **~60%**.
 - Architected server-side pricing and payment flows for multiple clients using a **Golang** backend with **Protobuf** and **ConnectRPC**, generating **Stripe Checkout** sessions to enforce **100%** prepaid requests and ensure pricing correctness.
 - Designed reusable, API-driven submission pipelines that create customers, process payments, and sync jobs into external client systems via **REST APIs**, enabling same-day job creation and eliminating duplicate operational data entry.
 - Co-developed internal client platforms using **Vue 3**, **Tailwind CSS**, and **Golang** backed by **MySQL**, replacing paper-based workflows and supporting daily use across **thousands of customer records**.
 - Led frontend architecture for a role-based **Vue 3** dashboard used by **~10 field mechanics** and staff, transforming fragmented workflows into a single production system used continuously across the company.
- Freelance Web Designer** January 2022 - September 2023
Self-Employed *Remote*
- Delivered and maintained responsive client websites using **JavaScript**, **Shopify**, and **Elementor**, driving a **15%** increase in sales revenue within **3 months** by improving site performance, layout, and checkout flow.
- Marketing Intern** September 2023 - December 2023
[REDACTED]
- Analyzed engagement data and executed content experiments across social platforms, increasing client engagement by **40%** through data-driven iteration and performance tracking.

PROJECTS

- Moodify - AI Music Playlist Generator** | *React, TypeScript, JavaScript, Golang, OpenAI GPT-4, Tailwind CSS*
- Built a full-stack playlist generator by developing a **React/TypeScript** frontend and **Golang** backend that converts natural-language mood prompts into structured inputs for the **Spotify API** using **GPT-4**.
 - Improved authentication reliability by implementing **OAuth 2.0** with JWTs, CORS, and HTTPS middleware in a **Golang** backend, achieving a **95%** successful login rate across user sessions.
 - Increased consistency of AI-generated results by designing structured **GPT-4** prompts that output validated **JSON**, enabling deterministic parsing and direct execution of playlist creation requests via the **Spotify API**.
- JerryBot - AI-Powered Discord Chat Bot** | *Golang, Go-OpenAI, DiscordGo, Docker, Azure*
- Handled **100+** daily commands across 3 Discord servers by deploying a Dockerized bot on **Azure** Container Instances.
 - Reduced response latency by **40%** using regex-based routing and optimized **GPT-3.5-turbo** API calls.
- Web-Scraper – Automated E-commerce Data Pipeline** | *Golang, Colly*
- Developed a **Go/Colly** crawler with cron to automate extraction and normalization of product data into JSON.
 - Enhanced pipeline reliability and enabled daily refreshes by integrating **Colly** async requests with goroutine pooling.

TECHNICAL SKILLS

Languages: Golang, C++, JavaScript, TypeScript, Python, HTML, CSS, SQL
Frameworks/Libraries: React, Vue 3, Tailwind CSS, Go-OpenAI, DiscordGo, Gin, Colly, Vite
Developer Tools: PostgreSQL, Docker, Git, Azure, VS Code, Figma, Postman, GitHub, WSL
Concepts: Full-Stack Development, Frontend, Backend, Software Engineering, Object-Oriented Programming, RESTful APIs, Data Analysis
