

EDUCATION

University of Michigan, Bachelor of Science in Engineering

2022-2026

- Major: Computer Science Engineering, Minors: Mathematics, Entrepreneurship
- Relevant Coursework: DSA, DB Management Systems, Web Systems, Computer Networks, Intro to AI, Intro to OS

EXPERIENCE

Backend Software Engineer, [REDACTED]

2025-2025

- Architected and launched Hurdits, a fully serverless AWS-based gamification platform, incorporating streak tracking and milestone achievement systems to promote long-term user retention and engagement
- Built event-driven backend architecture using AWS Lambda, EventBridge, and DynamoDB, enabling scalable real-time reward processing and achievement tracking with minimal operational overhead
- Conducted comprehensive integration testing across microservices, validating all event-driven workflows to ensure the new gamification module integrated seamlessly with zero production impact.

Education Lead, Michigan Hackers

2023-Current

- Led weekly technical workshops on quantitative finance and AI, delivering deep dives into predictive programming models and hill-climbing optimization techniques to upskill a 40+ member team
- Directed an applied research project integrating computer vision pipelines with large-scale LLMs, driving end-to-end model development, fine-tuning, and deployment for scalable, real-world use cases

Discussion Leader, Traders At Michigan

2023-Current

- Captured 1st place in a competitive trading challenge by deploying quant-driven strategies, including arbitrage and momentum trading, backed by real-time data modeling.
- Acquired hands-on experience with Bloomberg Terminal, employing trading tools to perform fixed-income analysis.

Web Development and Online Marketing Strategy, [REDACTED]

2018-2022

- Built online ordering and digital marketing strategies, resulting in a 20% revenue increase from online ordering.
- Implemented Search Engine Optimization (SEO) strategy with keyword optimization and backlink building to enhance the website's visibility, resulting in a 33% increase in both web traffic and call rates

PROJECT EXPERIENCE

Social Media Datascraper · Python, APIs, NLP, Data Scraping

2025

- Engineered a full-stack news summarization pipeline using Python and Reddit APIs, enabling real-time extraction and ingestion of high-throughput, unstructured social media data for downstream processing
- Leveraged advanced natural language processing (NLP) techniques and large language models to generate context-aware, human-readable synopses of breaking news and trending topics across diverse content domains
- Optimized system performance and responsiveness by implementing asynchronous API handling, intelligent retry logic, and fault-tolerant error management across the data ingestion and processing pipeline

Chess AI Engine · Minimax, Alpha-Beta Pruning, MVC Architecture

2024

- Engineered a feature-rich chess engine in C++ using the minimax algorithm enhanced by alpha-beta pruning, enabling efficient traversal of game trees and highly responsive AI decision-making
- Architected the project using MVC design patterns to isolate business logic, visual interface, and control flows, significantly improving code organization, testability, and modular development
- Implemented each chess piece as an extensible, polymorphic class with encapsulated movement rules, enabling clean, reusable gameplay logic and future scalability across board variants

MAJC AI Therapist · Electron.js, JavaScript, UX/UI, Performance Optimization

2023-2024

- Built a fully functional AI therapist desktop application using Electron.js, integrating intuitive, scrollable input interfaces and modular frontend components for seamless user interaction across platforms
- Optimized runtime performance via intelligent caching strategies, memory profiling, and load testing, reducing response times under stress while ensuring consistent application fluidity and responsiveness

Banking Account Manager · C++, DSL Design, Hashmaps, BSTs, Transactions

2023

- Built a custom banking backend system using hashmaps and binary search trees to model account structures and optimize retrieval operations for diverse, high-volume financial data types
- Designed a robust domain-specific language (DSL) for transaction management, allowing structured execution of complex queries, balance transfers, and account modifications with minimal overhead

ADDITIONAL INFORMATION

- Coding Languages (order of expertise): C++, Python, SQL, JavaScript (React), Java, Go
- Fluent Languages: English, Chinese, Fuzhounese
- Leadership: Restaurant Manager, President (Lambda Phi Epsilon fraternal organization), Mentor (Michigan Hackers)
