EDUCATION

John Doe High School

Ontario Secondary School Diploma

Expected 2026

EXPERIENCE

IT Device Technician

June 2025 – August 2025

- Set up, configured, and administrated certain programs on Android OS tablets.
- Utilized Kiosk Mode to lock down devices and configure them for secure company-wide distribution.
- Comprehensive inventory management and asset tracking of 300+ devices.
- Ensured alignment with the IT department objectives, time, date, and standards.

Python Instructor

March 2025 – May 2025

- Taught programming sections for a 15 student classroom using Python, helping students build CLI applications and debug code in real time.
- Created sample programs and walkthroughs to explain core concepts (loops, functions, data structures), improving student assignment accuracy.
- Guided students through challenges by hosting group problem-solving sessions, encouraging collaboration and helping the class develop stronger debugging habits.

Information Officer

April 2025

Elections Canada

- Welcomed and assisted voters at the voting station for the Federal Election.
- Maintained smooth operations during peak voting hours, ensuring voters were assisted quickly and accurately.

PROJECTS

ResumeGrader | Python, PyTorch, Pandas, Torch, Scikit-learn, Deepseek API, Requests, CLI

- Built an AI-powered Python resume evaluator using PyTorch and SentenceTransformers embeddings for semantic skill and experience analysis.
- Applied Scikit-Learn TF-IDF vectorization and cosine similarity to measure job-description fit with weighted scoring algorithms.
- Implemented batch PDF parsing and data management using Pandas and PyMuPDF for scalable processing.
- Integrated optional DeepSeek API for enhanced AI scoring and contextual analysis.
- Runs as an interactive Python CLI app for real-time resume grading, configuration management, and automated ranked output.

Simple System Monitor | JavaScript, Node.js, Express, WebSockets, React, Vite, systeminformation

- Developed a real-time system monitoring application that collects and visualizes live CPU, GPU, memory, disk, and network metrics.
- Implemented a Node.js backend using Express and WebSockets to collect and stream system metrics to clients with low-latency updates.
- Implemented a React frontend using Vite that receives live WebSocket data and displays the metrics in real-time.
- Designed an automated Windows batch script (.bat) to handle dependency installation, launch backend and frontend services, and open the monitoring dashboard with a single click.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, HTML/CSS, C++

Frameworks/Libraries: Nmap, Scapy, PyTorch, Java Applets, Flask, Node.js, React

Developer Tools: VS Code, IntelliJ, Wireshark, Git, Arduino, Burp Suite, VMware, Adobe Photoshop, Adobe After Effects
