

First Last

Education

T10 CS university in US

Aug. 2021 – Aug 2025

B.S in Computer Science

- **Coursework:** Data Structures, Computer Architecture, Operating Systems, Algorithms, Machine Learning, Software Engineering, IOS Mobile Computing, Cloud Computing, UI/UX Design, Cybersecurity/Hacking

Experience

University-sponsored startup

Remote

Software Engineer

Mar 2025 - Current

- Co-created [XXX], an LLM-based learning management system using Retrieval Augmented Generation (LangChain/GraphRAG/Pinecone/Letta) to provide tutoring agents, custom feedback & autograding
- Lead company-wide building and refactoring of 15+ Next.js/Typescript/Tailwind frontend pages and functionality with AI-assisted tooling (Copilot/Cursor); Served as rotational Scrum master for weekly sprints
- Introduced cloud-native workflows for AI infrastructure using AWS EC2, Docker, Kubernetes, and MLFlow, lowering infrastructure costs by roughly 25% through autoscaling and efficient resource allocation
- Built a concurrent ingestion system using AWS S3 for object storage & FastAPI, Redis and PostgreSQL for low-latency lookups, increasing throughput 4× and reducing bottlenecks for university onboarding

Small Finance firm

Software Engineering Intern

March 2024 - August 2024

- Built a predictive modeling system for claim valuations through an Ordered-Probit regression using Java, SpringBoot, MySQL, and Apache Airflow, reducing RMSE by 23% compared to prior models
- Engineered a new UI for the legal services suite using Vue.js, Bootstrap, and bespoke RESTful APIs, enabling seamless client workflows and supporting a 2× growth in concurrent active users without degradation
- Built a Jenkins YAML pipeline & JUnit test framework to accelerate CI/CD, speeding model rollouts 20%

Toyota

Software Engineer Intern

May 2023 - Aug 2023

- Designed and implemented a sound filter integrating automated speech recognition, Hugging Face Transformers, and dimensionality reduction to remove noise to vehicle voice agent, improving performance 18%
- Added N-grams and TF-IDF vectorization to improve precision of financial document classification pipeline and yielded a 12% net increase across all model sectors
- Implemented multi-stage inference with BERT for Named-Entity Recognition, doubling ID tagging accuracy

Projects

KubeSim - Docker, Kubernetes, Helm, Prometheus, Fluentd

- Designed and deployed a cloud-native personal finance tracker as a multi-service Kubernetes application, with UI, API gateway, budgeting, analytics, and notification services
- Managed application cluster on GCP with persistent volume stores, Prometheus metrics and Fluentd logging
- Packaged multiple service instances with Helm and enabled multi-tenant cluster sharing using KubePlus

GeoGAN - PyTorch, OpenCV, Scikit-Learn

- Developed a Deep Convolutional Generative Adversarial Network(DCGAN) for reconstructing images of rock facies under Professor [XXX]
- Added Bayesian hyperparameter optimization and improved Structural Similarity Index(SSIM) scores 18%

Skills

Languages: Java, Python(TensorFlow, PyTorch, Scikit), C++, R, HTML/CSS, SQL, JavaScript

Frameworks: React.js(Vite, Vue, Next), Jinja, Django, Flask, Node, MongoDB, MySQL, PostgreSQL

Tools: Linux, Git, Terraform, AWS(Lambda/DynamoDB/ECS), Airflow, Docker, Kubernetes, GCP, Jenkins
