EDUCATION

Public University

Bachelor of Arts in Computer Science, Concentration in Information Technology

City, State
Aug. 2020 – Dec. 2024

EXPERIENCE

IT Support Associate I

Large Global Technology Company

May 2025 – Present
City, State

- Provide Tier 1 infrastructure and systems support within a large-scale enterprise environment, assisting senior engineers in maintaining reliable computing and network operations.
- Troubleshoot hardware, software, and network connectivity issues; escalate infrastructure-level incidents to appropriate engineering teams to minimize downtime.
- Configure and troubleshoot Cisco network switches, including port configuration, connectivity validation, and basic network issue resolution under senior engineer guidance.
- Assist with hardware provisioning, system configuration, and post-deployment validation to ensure infrastructure components meet operational requirements.
- Document incidents, configurations, and resolutions through accurate ticketing and logs to support operational continuity and infrastructure reliability.

Database Design Intern

Financial Services Organization

Jan 2024 – May 2024
City, State

- Developed a robust MySQL database system to manage and analyze potential employee information, ensuring accurate and efficient data handling.
- Applied Boyce–Codd Normal Form (BCNF) to maintain data integrity, reduce redundancy, and improve database reliability.
- Collaborated with stakeholders to define system requirements and optimize database architecture for scalability and performance across four development sprints.
- Optimized SQL queries and stored procedures to enhance data retrieval speed and reporting efficiency.

PROJECTS

User Engagement Prediction: A Click-Through Rate Model | Python, Pandas, NumPy

Oct. 2024 – Dec. 2024

- Developed a Click-Through Rate Prediction Model using Random Forest, achieving 86.56% training accuracy and 80% testing accuracy.
- Evaluated model performance using confusion matrix, precision, recall, and F1 scores; identified key behavioral insights driving ad engagement.
- Authored a comprehensive report detailing data preprocessing, model selection, evaluation metrics, and ethical implications in ad targeting.

Windows Infrastructure Implementation & Administration |

Aug. 2023 – Dec. 2023

- Designed and managed a virtual Windows network environment, including setup, troubleshooting, and maintenance of virtual machines.
- Implemented role-based access control via Active Directory by creating Organizational Units (OUs), groups, and GPOs.
- Configured Group Policy Objects to enforce network security, password policies, and desktop environments.
- Integrated Active Directory with Microsoft Exchange for Single Sign-On (SSO) across services.

TECHNICAL SKILLS

Languages: Java, SQL, Python (Scikit-Learn, Pandas, Matplotlib, NumPy, Seaborn)

Tools: Jupyter Notebook, Power BI
