EDUCATION

University <i>Bachelor of Engineering in Computer Software Engineering (Co-op)</i> GPA: 3.9	Sep 2021 – May 2026 (Exp) <i>City, Province</i>
---	---

EXPERIENCE

Software Developer <i>Company</i>	May 2024 – Present <i>City, Province</i>
---	--

- Built the \$25M+ (Anon Project) for 2,000+ users, owning the full SDLC and delivering full-stack features with C#, JavaScript/TypeScript, PHP, Drupal, and Azure, including APIs and database design.
- Built a high-performance **C# (.NET) Excel parser** processing **100,000 rows in less than 2 seconds**, reducing extraction and validation time by **70%**.
- Designed and built a secure full-stack **RBAC (Role Based Access Control) system**, managing **2,000+ users across 100+ organizations**, enabling **efficient admin access control**.
- Migrated platform to React based Next.js SPA with B2C auth, dynamic forms, and SSR + Redis, cutting page load and report creation times by **65%**.
- Built a **production ready autocomplete system** using **.NET, Drupal, and Microsoft AI Search**, reducing search latency by **90%**.
- Enhanced **CI/CD pipelines** with Azure Pipelines, running **100+ Playwright tests**, improving production deployment confidence.
- Developed local front-end environments using Next.js and Drupal, leveraging **Docker containers** to streamline development workflows and **improve deployment efficiency**.

PROJECTS

CraveCart: Food Ordering Application <i>MERN: MongoDB, Express.js, React, Node.js</i>	June 2025
--	------------------

- Built a full-stack food ordering website with cart and order placement functionality.
- Implemented secure authentication via **password hashing, express-validator, and JWT**.
- Developed a **RESTful API** with an optimized **MongoDB schema** to handle user, menu, and order management, ensuring a modular and scalable architecture for efficient data retrieval.

CampusConnect: RSVP Management <i>Next.js API Routes, TypeScript, PostgreSQL</i>	Nov 2025
---	-----------------

- Implemented backend RSVP logic** distinguishing limited-capacity vs unlimited events with server-side validation.
- Prevented overbooking and ensured data consistency** by synchronizing RSVP records with event capacity and exposing APIs to retrieve confirmed participation via SQL joins.

P2P File Sharing Application (Index Server + Peer Client) <i>C, UDP/TCP Sockets</i>	Nov 2025
--	-----------------

- Built a UDP-based index server** supporting content registration, search, listing, and deregistration using custom PDUs.
- Implemented peer/content tracking logic**, rejecting duplicate registrations and selecting download sources by lowest download count.
- Developed a hybrid peer client**, coordinating UDP control with TCP file transfers and auto-registering downloaded content.

TECHNICAL SKILLS

Languages: Java, Python, C, C++, C#, TypeScript, PHP, HTML, CSS, JavaScript, SQL, GraphQL
Frameworks & Technologies: React, Vue, Next.js, Nuxt.js, Node.js, Express.js, MongoDB, Drupal CMS, .NET, Zod, Microsoft PowerApps, Microsoft AI Search
Tools & Skills: Git (version control), GitHub, Azure B2C, VMware, Mini-SDN, AWS/Terraform, Docker, Linux, CI/CD (Azure Pipelines, Jenkins, GitLab CI), full stack, test-driven development.
