EDUCATION

University of California, Berkeley

B.A. in Data Science and Applied Mathematics (Double Major)

Aug. 2023 – May 2027

Berkeley, CA

Relevant Coursework:

Data Structures & Algorithms (CS61B), Object-Oriented Programming (CS61A), Machine Learning (CS189), Data Science (Data 100), Probability Theory (Data 140), Computer Networks (CS168)

EXPERIENCE

Frontend Developer Intern

June 2025 – September 2025

Stealth Startup

San Francisco, CA

- Developed **5+** responsive React components for competitor comparison pages, implementing form validation, API integration, and mobile-first design
- Optimized site performance by **30%** through metadata improvements, code splitting, increasing organic traffic
- Collaborated in production workflows using Git and pull request reviews to ship pages to **10K+** monthly visitors

Lead Instructor / Instructor

March 2022 – August 2023

Mathnasium

- Designed and implemented new digital check-in system using Excel Scripts, reducing wait times by **40%**
- Trained and mentored **5** instructors while tracking student progress and outcomes

PROJECTS

Fantasy Forecast | *Next.js, Python, TypeScript, PostgreSQL*

December 2025 – Present

- Built an end-to-end fantasy football analytics platform using a Python backend and Next.js frontend to generate and serve weekly projections for **500+ players**
- Implemented RESTful APIs and a modern Next.js frontend using React, server/client components, and TanStack Query, for optimized data fetching, caching, and URL-based state
- Designed a normalized PostgreSQL schema with indexing and Row-Level Security; implemented batch processing and efficient upserts to compute weekly projections with opponent-based adjustments
- Deployed full-stack application on Vercel with PostgreSQL on Supabase, implementing environment configuration, database migrations and production monitoring for real user traffic

Live-Scribe | *FastAPI, React, OpenAI API, Whisper*

September 2025 – Present

- Built a voice transcription assistant that generates real-time transcripts, summaries, and action items from audio recordings, enabling efficient meeting documentation and note-taking
- Implemented efficient audio processing pipeline with batch chunking and asynchronous job handling, reducing total transcription time by 45%
- Designed and implemented a scalable full-stack workflow with React frontend and FastAPI backend handling concurrent audio processing and transcription using Whisper, and summaries via OpenAI

TicketAI | *JavaScript, Discord.js, Natural*

August 2025 – Present

- Contributed to a ticketing system used by **7500+** community members to automate role distribution and support requests
- Improved computer vision model accuracy by **13%**, enhancing detection quality and reducing false positives

Build Your Own World | *Java, Git*

December 2024

- Designed and implemented a modular 2D world engine in Java using object-oriented principles
- Developed core game mechanics including avatar movement, world navigation, input parsing, and state saving/loading
- Implemented BFS, DFS, and A* algorithms with stacks, queues, and priority queues to handle procedural map generation and efficient pathfinding, demonstrating strong data structure and algorithm skills
- Collaborated with a partner using Git to coordinate development, resolve merge conflicts

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, HTML, CSS, SQL

Frameworks: React, Node.js, Next.js, Tailwind CSS, Framer Motion, FastAPI

Developer Tools: Git, Vercel, npm, Supabase

Libraries: Pandas, NumPy, Matplotlib, Scikit-learn, Natural Language Toolkit
