EDUCATION

Bachelor of Science in Computer Science

Wright State University, Dayton OH

Apr-2026 (Expected)

GPA 3.2

Relevant Coursework: Java Software Development, Data Structures & Algorithms, Database Management, Operating Systems, Quantum Computing.

TECHNICAL SKILLS

Languages: Java, Python, C/C++, JavaScript, SQL, HTML/CSS

Frameworks & Libraries: Spring Boot, React, Angular, Django, Node.js, JUnit

Cloud & DevOps: AWS(EC2, S3, Lambda), Azure, GCP, Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD, Agile Scrum

Databases: MySQL, PostgreSQL, SQLite, MongoDB, Oracle

Tools & IDEs: Git, IntelliJ IDEA, VS Code, PyCharm, Android Studio, Unity Hub

EXPERIENCE

Software Developer Intern | Company 1| Milwaukee, WI | Summer 2025

- Contributed to backend services built with **Java** and **Spring Boot**, deployed in a **cloud-based environment (AWS)**, supporting GE HealthCare's Advanced Visualization platform by implementing feature enhancements related to **request validation, error handling, and service behavior** used by internal product teams.
- Fixed recurring defects in **Spring Boot** backend components, including validation gaps, null handling, and configuration issues, contributing to an estimated 20–25% reduction in repeated verification failures.
- Worked with **relational database-backed services (PostgreSQL / Oracle)**, validating and handling data accessed through the service layer to ensure correctness and consistency of backend workflows.
- Developed and maintained automated **unit and functional tests in Java using JUnit** and executed **manual test cases** for backend service behavior, improving regression coverage and identifying defects earlier in the verification cycle.
- Wrote **Python scripts** to support internal verification and test-data preparation workflows, reducing manual setup effort and test execution time by approximately 15–20%.
- Improved **logging and error reporting in Spring Boot services** deployed on **AWS**, enabling faster **root-cause analysis** and reducing average investigation time for common failures by ~20%.
- Updated and maintained **internal technical documentation** for backend services and test scenarios, while actively participating in **Agile Scrum ceremonies** to deliver assigned work consistently within sprint timelines.

Software Intern | Company 2|| Cleveland, OH | Summer 2024

- Worked on internal enterprise applications by building **Spring Boot REST APIs** deployed in a **cloud-based environment (AWS)**, writing **SQL queries** for **backend data access**, and connecting those APIs to **React-based UI screens** used by operations teams.
- Implemented backend business logic in **Java**, exposing data through **APIs backed by relational databases**, and ensuring correct data retrieval for reporting and workflow features.
- Built and updated **data driven React components** such as tables and filters, integrating them with **backend APIs** to deliver end-to-end functionality.
- Optimized selected **SQL queries** and **API paths**, improving response times for most used internal features by ~15–20%.
- Automated recurring **SQL-based reporting workflows**, reducing manual effort for operations teams by approximately 20–25% while following **Agile Scrum** and **enterprise SDLC standards**.

PROJECTS

Smart Shield (Android Hackathon App) — Java, Android Studio, VPN Service, Scapy

- Built a mobile security app detecting MITM/Evil Twin Wi-Fi attacks through **real-time packet inspection and signal anomaly analysis**.
- Developed automatic encrypted routing using **VpnService + OkHttp**, improving user safety on public networks by **90%**.
- Collaborated in a **3-member cross-functional team**, integrating features via Git/GitHub and optimizing performance under hackathon deadlines.

CERTIFICATION

- AWS Cloud Technical Essentials** – Amazon Web Services
