Education

University of Toronto

Expected May 2027

B.A.Sc., Computer Engineering, Minor in Business & Finance

Toronto, ON

- **Relevant Courses:** Software Engineering & Design, Data Structures & Algorithms, Artificial Intelligence, Operating Systems (Linux), Computer Networks

Technical Skills

Languages: Python, JavaScript/TypeScript, C++, C, Java, Assembly, SQL

Tools/Frameworks: AWS, React, Node.js, Convex, Docker, Kubernetes, Supabase, Postman, Django

Libraries: STL, Pandas, NumPy, Matplotlib, PyTorch, TensorFlow, Scikit-learn

Work Experience

BANK Capital Markets

Jan 2026 - Present

Software Engineer Intern

Toronto, ON

- Built **Python** services on **Kubernetes** to precompute correct timezone/DST data for **8M+** FX forward records in **Druid**, reducing per-query latency by **5ms** and improving performance for trader-facing systems
- Building real-time monitoring tools for the Front Office utilizing **Prometheus** and **Grafana**, ensuring traders have immediate visibility into system health to prevent downtime during market hours

BANK

May 2025 - Dec 2025

Software Engineer Intern

Toronto, ON

- Designed and built a high-throughput serverless payment API on **AWS Lambda** using **TypeScript** backend services that handle **80k+** weekly requests and deliver **99.9%** availability, allowing always-on payment processing
- Refactored **REST APIs** by migrating to modular **AWS SDK v3** clients and streamlining the request/auth pipeline, cutting authorization calls by **40%** and reducing **P99 latency** by **5 ms** across payment workloads

UNIVERSITY LAB

Jun 2023 - Sept 2023

Undergraduate Research Assistant

CITY, PROVINCE

- Developed and maintained a database of 10,000+ entries for commenting patterns found in Smart Contracts in **Solidity** using **Python** scripts, speeding up data processing by 3x
- Built a CLI tool using **Pyinquirer**, automating internal processes and cutting document upload times by 50%
- Extracted regular and NatSpec comments from Smart Contracts using **Pandas** and **NumPy**, analyzing their content to determine comment density and its correlation with code maintainability, security, and functionality

UNIVERSITY LAB

July 2022 - Sept 2022

Research Assistant

CITY, PROVINCE

- Synthesized 1,000+ academic journals into a structured **SQL** database, applying systematic research techniques like snowballing to map critical trends in code architecture
- Automated research data categorization using a **Python** script to cluster summaries based on keyword patterns

Projects

HomeTinder

[Website](#)

React, Vite, TypeScript, Supabase, AWS Lambda, Vercel, Postman

- Built a full-stack real estate discovery app from scratch using **React + Vite**, **Supabase**, and **AWS Lambda**, hosting 100k+ property listings and 200k+ images for live users on **Vercel**
- Automated daily **ETL** pipelines with **AWS Lambda**, cron jobs, and **GitHub Actions CI/CD**, reducing manual refresh time by 100% and ensuring zero-downtime deployments on code commits

Geospatial Routing Engine

[Github](#)

C++, OpenStreetMap, GTK, Glade, STL, Git

- Designed a multithreaded **C++** GIS engine processing 50M+ **OpenStreetMap** nodes, leveraging spatial hashmaps and non-blocking async data pipelines to reduce startup latency by 35% vs. serial execution
- Engineered a latency-optimized rendering and routing system using predictive viewport culling and custom cache-friendly A* graph structures, sustaining 80+ FPS under load and cutting path computation time to <85ms
