

SUMMARY

Full-stack developer experienced in **Laravel, Vue.js, React, Angular, ASP.NET, and Spring Boot**, building **scalable web applications** with RESTful APIs and real-time features. Skilled in **MVC architecture, automated testing, CI/CD integration, and performance optimization**, delivering responsive and user-focused solutions. Fluent in both **French and English**, passionate about creating **high-quality, efficient software** and collaborating with teams to solve complex problems.

SKILLS

Programming: Java - C# - Kotlin - PHP - Python - Javascript/Typescript MySQL - MariaDB - MySQLWorkbench - SQLite - NoSQL
Technologies : SpringBoot - Angular - React - ASP.NET - jQuery - Bootstrap - Postman - Docker
Project management: Jira- Github - Git, GitHub Actions CI/CD - AWS

WORK EXPERIENCE

Software Developer / QA Intern | Pirel Inc, Montréal

April - June 2025

- Contributed to the company's main product, UAP, by developing and executing automated tests (Selenium with C# and .NET) and integrating them into the **CI/CD pipelines**, effectively saving **5 hours per week of manual QA time**.
- Created a dedicated test **RESTful API** to simulate user creation and deletion, enabling isolated, repeatable and regression test runs.
- Integrated **Jira's API** to automatically update test results and streamline the **QA workflow** within the project management system.
- Deployed and tested services in **Dockerized environments** (API, Database, Frontend) for consistency across environments.
- Partnered with development team to identify and fix critical bugs via Jira and test reports, achieving a **20% performance boost** by optimizing backend processes and database queries.

PROJECTS

Event-Hosting Website | PHP, JS, Laravel Vue.js

- Built a full-stack hosting platform enabling users to **create, manage, and explore events**, with secure role-based access for organizers and regular users with **Sanctum authentication**.
- Implemented **real-time communication and event broadcasting** with **Laravel Reverb** and **Laravel Notifications**, enabling instant updates for messages, follows, and new events.
- Developed **event discovery and filtering features** (category filters, popularity ranking, recent activity) with a **responsive Vue.js interface**, managing client-side state efficiently using **Pinia**.
- Designed and optimized a **RESTful Laravel API using MVC architecture** for client communication, implementing **Redis caching** for faster response times and **SCSS** for a modern, responsive UI.

Social Network Website | C#, ASP.NET, JS

- Developed a social network app platform for sharing interacting with a friendly community.
- Implemented core functionalities using **C#** and **ASP.NET Core MVC** Enabled real-time communication feature using **WebSockets** and **SignalR** for chat and notifications.
- Used **EF Core ORM** (DbContext), Migrations, DTO & **SQL Server Express** for data access.

Medical Appointment Website | Java, Springboot, JS

- A platform that helps patients easily book, manage, and track medical appointments with trusted healthcare professionals.
- Built front-end using **HTML5, CSS3, Bootstrap, JavaScript, jQuery**, and Ajax for a responsive and interactive user interface
- Developed back-end with **Java EE, Servlet, JSP**, and **Spring Boot** for robust and scalable application logic.
- Managed data with **MySQL** to store patient, doctor, and appointment information.

EDUCATION

Advanced Diploma/ DEC Mobile and Web Development- IT
College Rosemont, Montréal

2025
