EDUCATION

University of Maryland

B.S. in Computer Science and Mathematics

AWS Certified Cloud Practitioner (Exam Scheduled January 2026)

Relevant Coursework: OOP I & II, Data Structures & Algorithms, Computer Systems (C/Assembly)

College Park, MD

Expected May 2027

EXPERIENCE

Agent Developer and GitHub Manager

Testudo Agentic AI (ACM Project Team)

Sep 2025 – Present

College Park, MD

- Led **GitHub** workflow and code reviews for **20+** devs, improving PR quality and reducing review cycles by **40%**
- Developed a **Python** automation framework, cutting agent integration time from 2+ hours to under 10 minutes
- Building **Gemini** planning pipeline with **Flask**, using prompt engineering and regex to generate structured output

Backend Developer

Leasetudo (UMD TerpLabs)

Sep 2025 – Present

College Park, MD

- Building and deploying **Express.js** REST API handling auth, listings, and user data with MongoDB backend
- Integrating **Google OAuth**-based login flow, reducing signup friction and enabling secure authentication
- Developing comprehensive testing suite with automated endpoint validation via **Postman**, achieving 90% coverage

Researcher

Algoverse Research

Jun 2025 – Dec 2025

Remote

- Evaluated **LLM** behavior and biases through qualitative analysis on models including Gemma and LLaMA
- Created **Python** pipelines to discover and apply LLM steering vectors, aimed at reducing bias on benchmarks
- Explored synthetic and contextual steering techniques in preparation for NeurIPS workshop submission

Researcher

Mani Lab, University of Connecticut

Aug 2023 – Aug 2025

Storrs, CT

- Developed **C++** analysis tools for magnet calibration, and **LabView**-based serial communication to instruments
- Reduced experimentation time by **70%** and improved experiment accuracy by **30%** through automations
- Co-authored published paper in JACS on magnetic field analysis: <https://doi.org/10.26434/chemrxiv-2024-45q9k>

PROJECTS

Code Runner | Java, Spring Boot, Docker, React, Fly.io

Dec 2025 – Present

- Deployed cloud-hosted **full-stack** platform on Fly using Docker-based sandboxing, supporting Java, Python, & C
- Built **Spring Boot** REST API in **Java** handling concurrent requests with resource cleanup and failure isolation
- Implemented multi-layer security: container isolation, resource limits, network restrictions, & execution timeouts

Task Manager | Jetpack Compose, Kotlin, Android Studio

Jun 2024 – Oct 2024

- Led small team developing Android application in **Kotlin** with MVC architecture for Congressional App Challenge
- Developed task data models, page navigation controllers, and responsive UI using **Jetpack Compose**

Java Simulations | Java, Blender

Aug 2023 – Jun 2024

- Developed 3D Graphics Engine from scratch in **Java** without external libraries, supporting Blender model imports
- Implemented custom matrix mathematics and polygon construction library for real-time 3D shape rendering
- Built Galton Board simulation with realistic physics, object distribution modeling, and tunable parameters

TECHNICAL SKILLS

Languages: Java, Python, C/C++, JavaScript/TypeScript, Kotlin, SQL, HTML/CSS

Frameworks: Spring Boot, React, Node.js, Express, Flask, TensorFlow, PyTorch

Tools: AWS, Docker, Git, MongoDB, Postman, VS Code, Bash, Linux

Technologies: REST APIs, CI/CD, OAuth, Container Orchestration
