

EDUCATION

Honours Bachelor's of Computer Science

Dec 2028

GPA: 3.9/4.0

Relevant Coursework: Data Structures, Object-Oriented Software Development, Tools & Techniques for Software Development, Logic & Computation, Foundation of Sequential Programs

TECHNICAL SKILLS

Languages: C/C++, Python, JavaScript, TypeScript, Go, SQL, HTML/CSS

Frameworks: Next.js, React, React Native, Node, Express, Django, Flask, Tailwind, REST APIs

Libraries: OpenCV, Mediapipe, TensorFlow, Keras, NumPy, Pandas, Scikit-Learn, gTTS

Development Tools: CI/CD, Snowflake, AWS, Git, Bash, Linux, MySQL, PostgreSQL, Arduino, YAML, GCP, Docker

EXPERIENCE

Software Developer Intern

May 2025 – Aug 2025

- Refactored **Python** code for **2 pipelines** and **7+ threat services** using **Go** templates, **YAML**, and **REST APIs**
- Developed **20+ http, transform, snowflake handlers** to allow efficient & fast flow of data through pipelines
- Reduced **70% code duplication** and increased **50% component re-usability** via **CI/CD** optimization
- Lowered** average **SQL query runtime** in Snowflake **from 10s to 7s** by optimizing store procedures
- Accelerated **pipeline component deployments** via **AWS**, shipping each to production within **48 hours**
- Selected to **train an incoming intern** due to **rapid mastery** of the codebase, resulting in the **intern shipping to production** within their **first two weeks**

PROJECTS

SpeakEz | React.js, Flask, Arduino, Keras, TensorFlow, NumPy

- Built a wearable ASL glove using flex sensors, Arduino, & CNN (**95% letter classification accuracy**)
- Reduced ASL -to- speech latency to **under 2 seconds** by optimizing sensor data streaming
- Integrated a website with **Flask and React** for accessibility and ASL learning with confidence score in %

SkillScan | React.js, Node.js, Express.js, gTTS, Google Cloud API, OpenAI API

- Developed SkillScan (**50+ demos**) at GeeseHacks, an AI-powered resume analyzer and mock interviewer
- Integrated **OpenAI's GPT-4** & **GCP** to analyze resumes and generate real-time feedback
- Tested the tool with **50+ resumes** and **20+ interviews**, providing efficient real-time feedback

RecyClean | OpenCV, gTTS, Google Cloud Vision API, OpenAI API

- Developed RecyClean - an AI-powered real-time waste classification tool (**40+ demos**) at HackVille
- Used **OpenCV + GCP Vision + OpenAI's GPT-4** to identify trash and gTTS for disposal instructions
- Successfully classified **50+ waste items** into organic, electronics, recyclable, trash, or miscellaneous

GestureGroove | Django, OpenCV, React.js, Spotify API

- Engineered a gesture-controlled Spotify music controller (**50+ demos**) for hands-free music control
- Accelerated music control by **50%** via **OpenCV**, replacing traditional buttons with an intuitive experience
- Delivered **full-stack** system with backend built in **Django** and frontend real-time detection in **React**

Structify | React.js, Node.js, Chrome Extension API

- Engineered an AI-powered extension **organizing 50+ tabs** into smart categories for efficient browsing
- Reduced workspace clutter by **40%** and accelerated tab navigation by **50%** via the **Chrome Extension API**
- Built a sleek, responsive UI using **React.js** and used **Node.js** for backend and instant context switching

HONORS & AWARDS

- Outstanding** Evaluation:
- Scholarship**
