EDUCATION

University of California, San Diego

Major: Data Science - GPA: 3.97

Completed Relevant Coursework: DSC10 - Principles of Data Science, Math18 - Linear Algebra, DSC20 - Programming and Basic Data Structures, Math20C - Multivariable Calculus DSC30 - Data Structures and Algorithms, DSC40A - Theoretical Foundations of Data Science, COGS14A - Research Methods, DSC80 - Practice of Data Science, DSC40B - Theoretical Foundations of Data Science II, COGS14B - Statistical Analysis

Planned Relevant Coursework: Math20D - Differential Equations, Math180A - Probability Theory, DSC100 - Databases, Math180B - Stochastic Processes I, Math181A - Mathematical Statistics Theory

Past Employment

Eichler Swim and Tennis Club

Lifeguard, June 2022 - September 2025 (Summer Job)

- Monitored the pool and made quick decisions based on current conditions to ensure safety of patrons.
- Collaborated with up to 3 guards at once to watch the pool, check chemical levels, keep facilities clean, and communicate with customers.
- Underwent regular in-person training to continue to improve skills and stay qualified.

EXPERIENCES

Baseball Payroll Analysis, Eclipse Analytics Club-Project

- Worked with a partner to create predictive models for baseball success using teams' budgets. Used Beautiful Soup 4 to webscrape data on teams' budget and win record. Used Matplotlib, Pandas, and SKlearn to make linear and logistic predictive models based on the team's budget normalized by year.

Facial Recognition Project, Self-Project

- Uses Pytorch to create a CNN to recognize similar faces. Contrastive loss is used for model training. Achieved an AUC of .971 and a mean separation of .63 between inter-class and intra-class distances

League of Legends Win Rate Analysis, Class-Project

- Used a random forest model to predict the outcome of games. Achieved a test accuracy of 85% and also assessed the importance of different features. Website detailing the project [here](#).

Chatbot using Stack Overflow Q&A, DS3 Club-Project

- Worked in a group of 4 to make a chatbot that retrieves answers from a Stack Overflow dataset based on user queries. Prompted an LLM to answer the user query from retrieved answers (RAG). This allowed the LLM to answer questions it otherwise could not, and forced it to provide more conservative answers.

RELEVANT SKILLS

- Python, Java, Pandas, SQL, Excel, Pytorch, Sklearn, Tableau, Matplotlib, Plotly, Git, GitHub.
