EDUCATION

University of California, San Diego - Halicioglu Data Science Institute

Expected June 2028

Bachelors of Science in Data Science, Double Minor in General Biology and Mathematics

La Jolla, CA

GPA: 3.85/4

Completed Coursework: Data Science Principles, Data Structures & Algorithms, Introductory Biology Lab, General Biology

Expected Coursework: Probability Theory & Math Statistics, Data Science Theory, Recombinant DNA Techniques

Shorecrest High School

June 2024

3.98 GPA, 1510 SAT, 34 ACT, 4 Gold President's Volunteer Service Awards, National AP Scholar with Distinction

Shoreline, WA

TECHNICAL SKILLS

Programming: Python, Java, MatLab, O.O.P., SQL

Software Tools: Git/GitHub, Pandas, NumPy, Matplotlib, DSPy, Excel

EXPERIENCE

Edapt Schools

July 2025 - Sept 2025

Machine Learning Research Intern

- Developed and researched a natural language processing system using **DSPy** modules, Open AI LLMs, and **prompt optimization** to extract numerical data from financial documents and execute multi-step mathematical computations
- Constructed validation dataset scenarios in **JSON/YAML** format containing **100+ numbers** and **500+ words** covering extraction, multi-step conditional algebra, averages, percent changes, and weighted metrics
- System returned **90+% accuracy** in extracting relevant data and **95+% accuracy** in performing calculations correctly and is currently being built into production by company execs

Boolean Lab

Oct 2025 - Present

Undergraduate Volunteer

- Utilized **boolean implication analysis** to research the relationship between genes and their expression, possibly identifying biomarkers for various diseases and cancers
- Assisted in **processing and analyzing** genomic datasets, including RNA-seq and transcriptomic data, using **exploratory data analysis** and biological domain knowledge

Technology Student Association

Sept 2023 - July 2024

Data Science and Analytics Competitor

- Cleaned and analyzed **10,000+** of rows of data on literacy levels in America using Excel and Jupyter Notebook
- Committed 4 hours a week for a month to work with team on completing the project
- Wrote and presented a [research paper](#) and poster on the topic to judges at the Washington State TSA Conference
- Team placed **6th overall** in state out of 22 teams

TECHNICAL PROJECTS

Taylor Swift Song Recommender

Oct 2024

- Analyzed large dataset of popular songs and Taylor Swift songs using **Pandas** and **Python**
- Wrote system that recommends user's top 5 Taylor Swift songs based on an input song using Euclidean Distances and **statistical modeling**

TV Show Reboot Predictor

Dec 2024

- Analyzed "Friends" TV show dataset using **Pandas** and **Python**
- Used **hypothesis testing, data visualization, and predictive modeling** on viewership data, ratings, and more to predict the most successful qualities of a potential show reboot such as season length, episode director, and episode titles

ACTIVITIES & INVOLVEMENT

Data Science Student Society | Historian

Oct 2024 - Present

- Attended all possible club events and **photographed** them to upload on various platforms, garnering an average of **1500 views** for each post

UCSD PepBand | Historian

June 2024 - Present

- Planned and hosted** social events throughout the school year, creating a welcoming environment for new and returning members of the club. Photographed school basketball games, parades, and special occasions as well
