

YUV MAGAN

612-840-8898 | yuv.magan@gmail.com | <https://www.linkedin.com/in/yuv-magan/>

EDUCATION

University of California, San Diego | La Jolla, CA | B.S. Data Science | GPA: 4.00/4.00

Sept 2025 - Ongoing

Wayzata High School | Plymouth, MN | GPA: 3.96/4.00

Sept 2021 - May 2025

Courses: AP Computer Science A, AP Statistics, AP Calculus AB/BC, AP Physics C Mechanics, AP Micro/Macroeconomics

EXPERIENCE

TicketSync | University of California, San Diego | Backend Developer

Oct 2025 - Dec 2025

- AWS-based fully automated ticketing platform for e-commerce companies
- Created Lambda functions using AWS Comprehend for sentiment analysis to rank tickets based on priority and store them in DynamoDB, lowering the manual effort needed by admins to resolve issues
- Provisioned resources using Terraform to set up the AWS environment and integrated the frontend with the backend using API Gateway
- Served as lead presenter at DinoCage, a Shark Tank-style event in front of judges

Maritime Risk Analysis | University of Minnesota, Twin Cities | Researcher

Oct 2023 - June 2024

- Developed and tested a potential solution involving bearing change to detect anomalous behavior in the maritime industry through analysis of tanker ships hiding illegal activity by faking their location
- Strong focus on risk detection and enhancing safety and security for international trade to strengthen global supply chains
- Utilized a large-scale normal dataset involving over 5000 trajectory points across 10 ships in comparison with an anomalous spoofed trajectory
- Cleaned and reorganized data to effectively compare metrics in dataframes using Pandas
- Analyzed a large sample of datapoints, utilizing NumPy to uncover a strong average deviation of over 53 degrees in bearing change between normal and anomalous trajectories
- Constructed multiple visualizations using Matplotlib, such as frequency plots, to clearly identify the underlying pattern of abnormal trajectories having greater bearing changes
- Calculated a KL Divergence score of over 1000 between the normal and anomalous distributions
- Illustrated that bearing change is an effective indicator of fake trajectories due to high deviation and KL divergence scores

Predictive Modeling | University of Chicago | Summer Student

July 2023 - Aug 2023

- Collaborated on a project focusing on maximizing gains in the Stock Market Game simulation based on analysis of market trends
- Analyzed real stock data on JupyterNotebooks using Pandas
- Built models in Python using Scikit-learn, running KNN regression algorithms to forecast performance of Coinbase, Johnson & Johnson, Carvana, and other stocks
- Developed heatmaps and frequency plots using Matplotlib to visualize insights and create data-driven strategies focused on optimizing the performance of the stock portfolio
- Communicated insights and shared dashboards with team members, paralleling real life business decision making
- Utilized insights to develop strategies for each stock – determining whether to buy, sell, or short in specific amounts
- Earned over 10% in profit due to highly accurate model performance

SKILLS

Technology: Python (Pandas, NumPy, Matplotlib, Scikit-learn), AWS, Terraform, Java, JavaScript, Data Visualization, Excel/Sheets

Business: Analytical, Decision Making, Leadership, Collaboration, Communication, Teamwork, Innovation, Presentation

Languages: English, Spanish, Hindi

AWARDS & ACCREDITATIONS

- AWS Certified Cloud Practitioner
- Triton Scholar Award
- 2x DECA International Qualifier, Quiz Bowl National Qualifier, & Destination Imagination Global Finals Qualifier

EXTRACURRICULARS

- DECA - International business and entrepreneurship competition consisting of many different prepared and unprepared events.
- Quiz Bowl - National academic quiz competition focused on analytical and quick thinking ability
- Destination Imagination coach/judge - Mentor to young students in expanding their creativity and critical thinking skills across multidisciplinary challenges
