EDUCATION

University of San Diego

La Jolla, CA

Bachelor of Data Science with a minor in Business Analytics

Expected Graduation Date - June 2027

Relevant Coursework: Data Structures and Algorithms, Machine Learning, Database Systems, Probability and Statistics, Linear Algebra, Data Visualization, Business Analytics

TECHNICAL SKILLS

Programming Languages: Python, Java, SQL, JSON, CSS, LaTeX

Data Science & Analytics: Machine Learning, Data Mining, Data Visualization, Data Cleaning, A/B Testing

Tools & Technologies: Git, Excel, Tableau, Google Cloud Platform, Visual Studio, IntelliJ

EXPERIENCE

Technician/Operations Assistant

2019 – Present

Vegetable Delivery Business

Fremont, CA

- Developed a Python automation script that integrated with Excel to organize customer data, processing over 100+ customer records per batch.
- Eliminated manual work through Python automation pipeline to clean, structure, and analyze customer data for easy access and computation.
- Reduced data organization and logistics computation time to a few minutes per operation, boosting overall productivity by 200% and enabling faster client response times.

DS3 Director

January 2025 – Present

UCSD

La Jolla, CA

- Coordinated with multiple departments and team members to plan and execute over 10 community-building events and initiatives, ensuring smooth operations and strong student engagement.
- Led programs such as study jams, game nights, and mentor-mentee events that fostered collaboration and belonging among data science undergraduates.
- Increased event participation by 100% and club revenue by 50% while strengthening peer connections across the data science community through consistent outreach and feedback-driven event planning.

Logistics Campus Mail Assistant

August 2025 – Present

UCSD

La Jolla, CA

- Managed high-volume mail and package operations across campus, utilizing both manual handling and OPEX sorting technology to streamline processes.
- Coordinated with multiple carriers and campus service department to ensure timely distribution, applying logistics and customer service skills to resolve delivery issues and maintain a 99.99% on-time rate.
- Supported special projects including route optimization and process integration, through trials and errors, improving overall operational efficiency and reducing redundant delivery routes.

PROJECTS

Heatmappers Forest Fire Simulation | *Python*

- Performed large-scale data engineering and machine learning development for the National Data Platform Challenge, processing 500K+ terrestrial LiDAR scan (TLS) records for ecological analysis.
- Developed predictive models to classify tree functional types, achieving 89.6% accuracy and 99% R^2 in canopy-base height and crown-radius imputations.
- Authored and presented the final research report with validation analyses, leading the team to win 2nd place in SDSC's competition.

League of Legends Game Length Predictor | *Python, HTML*

- Cleaned and analyzed over 110,000 professional esports matches from the 2024 League of Legends dataset to identify key factors influencing game length and team performance trends.
- Developed and optimized a time-aware linear regression model, engineering features such as kill counts and gold/experience differentials across multiple game stages.
- Improved model accuracy by 30% over the baseline through systematic hyperparameter tuning and performance validation, demonstrating strong predictive capability for match duration.

Bob's Gait Pattern Analyzer | *Python, HTML, Javascript*

- Developed an interactive web application that visualized gait data from real biomechanical datasets, enabling comparison between healthy and neurodegenerative walking patterns.
- Implemented an interactive "click-to-record Bob" feature with detailed stride, swing, stance, and double-support phase visualizations for intuitive side-by-side movement analysis.
- Integrated educational storytelling and visual explanations to highlight the medical significance of gait patterns, promoting awareness of early detection and home-monitoring applications.
