EDUCATION

University of California, San Diego

June 2028

Bachelor of Science in Data Science

GPA: 3.5/4.0

Relevant Courses: The Practice and Application of Data Science, Data Structures and Algorithms, Foundations of Data Science

SKILLS

Data Science & Machine Learning: Pandas, Polars, Prophet, TensorFlow, PyTorch | **Programming & Databases:** CSS, Python, SQL, Java, JavaScript | **Data Engineering & Cloud:** AWS (Lambda, S3), REST APIs, JSON | **Tools & Visualization:** Git, React Native, Figma, Adobe Suite, Microsoft Suite

EXPERIENCE

KlonIt

August 2025–September 2025

Software Engineer Intern

Remote

- Built the frontend for KlonIt's AI productivity agent in **React Native**, releasing a cross-platform app to 500+ early users.
- Integrated an AI chatbot and secure **REST APIs**, enabling users to manage daily tasks and boosting engagement.
- Designed and iterated on 3 **Figma** prototypes, improving usability and informing final **UI/UX** decisions.

UCSD Summer Program for Incoming Students

June 2025–September 2025

CSE Mentor

La Jolla, CA

- Mentored 50+ students in **Python** applications including image processing, cryptography, and data mining.
- Provided one-on-one support during lab hours (15 hours/week), resolving errors and reinforcing core concepts.
- Graded 20+ assignments and tracked improvements through Gradescope and **GitHub**.

Rimble

July 2025–August 2025

Data Science Intern

Berkeley, CA

- Validated esports data pipelines on **Amazon S3** to ensure accurate **JSON** delivery of match outcome predictions.
- Optimized **AWS Lambda** functions and versioned bug fixes in **Git**, reducing execution errors by ~30%.
- Parsed JSON files with embedded **HTML** to extract in-game statistics, improving client-facing analytics.

Out of the Blue

April 2025–June 2025

Data Tech Consultant

Remote

- Designed **Facebook Prophet** models enabling early detection of 40+ critical incidents by detecting anomalies in key metrics.
- Preprocessed large-scale time series data with **Polars** and **Pandas**, boosting anomaly detection accuracy by 20%.
- Classified anomalies into client-defined user-funnel scenarios, ensuring alerts were usable for incident response.

The Boeing Company

June 2024–July 2024

BEAM Member, Product Research Developer

Huntington Beach, CA

- Prototyped a stroke-detection device with CAD and market analysis; pitched to senior Boeing employees and won Best Project.
- Delivered a feasibility study analyzing 5+ competitors and cost models, shaping commercialization strategy.

Cybersecurity Summer Intern & Integrated Product Team Leader

June 2023–August 2023

- Developed a Python program on **Ubuntu Linux** for secure client–server communication using socket programming.
- Led 12 interns in documenting 70+ company events, assigning roles and managing deliverables to expand Boeing visibility.

LEADERSHIP

External Corporate Co-Lead, UCSD Data Science Student Society

January 2025–Present

- Outreached and maintained pre-existing relationships between corporations such as Palantir, ASML, and Apple.
- Coordinated DataHacks with 700+ participants, overseeing corporate outreach and logistics.

Technical Analyst Committee Member, UCSD Triton Consulting Group

December 2024–Present

- Completed a 4-hr/week consulting training program to practice case studies and deliver technical projects.
- Assisted with recruitment logistics, managing 300+ applications and helping narrow the pool to 50 accepted members.

PROJECTS

Email Automation, UCSD Triton Consulting Group

January 2025–February 2025

- Built an automated pipeline with NoDriver, Apollo.io, and yagmail to reach 50+ clients in minutes.
- Delivered the tool to expand outreach capabilities and open new project opportunities.
- Expanded functionality and fixed bugs to improve reliability for long-term use.
