

Jamera Mellyn Fernando

(714) 478-4422

jameramellyn@gmail.com • [linkedin](#) • [github](#)

Education

University of California, San Diego

Spring 2027

Bachelor of Science in Data Science, Minor in Cognitive Science

Relevant Courses: Introduction to Data Management, Data Science in Practice, Data Structures and Algorithms, Theoretical Foundations of Data Science, Statistical Methods

Skills

- **Languages and Frameworks:** Java, Python, JavaScript, CSS, R, React, React Native
- **Databases and Cloud:** PostgreSQL, MongoDB, Firebase, AWS (Lambda, S3)
- **Machine Learning:** TensorFlow, Pytorch, Prophet

Work Experience

HDSI Lab 3.0 Fellowship, La Jolla

Data Science Lab Assistant

10/2025-Present

- Designed microcontroller projects using Arduino and deployed them for educational workshops.
- Adapted to a fast-paced lab environment by wiring hardware systems and collecting GPS data.
- Led bi-weekly workshops for 30-50 K-12 students, strengthening foundations on data science.

Rimble, Berkeley

Data Science Intern

07/2025-08/2025

- Analyzed the backend development for gathering and processing data of esports platforms.
- Validated large-scale analytics pipelines on Amazon S3, ensuring delivery of JSON data.
- Optimized 50+ AWS Lambda functions and versioned bug fixes in Git to reduce errors.

Out of the Blue, Remote

Data Tech Consultant

04/2025-6/2025

- Designed Facebook Prophet time series models to detect anomalies across e-commerce metrics.
- Classified anomalies into 6 client-defined user-funnel scenarios, translating root-cause analysis.
- Presented findings to senior developers, delivering deployment-ready documentation.

Projects

Low Price Center Website, Computer Science Engineering Society

12/2025-Present

- Spearheaded full-stack development of the Individual User Profile page for user personalization.
- Designed and extended MongoDB user schemas to support profile pictures and bio data.
- Expanded backend API endpoints to allow profile updates and retrieval of user-listed products.

Predictive Modeling for Food Ratings

12/2025

- Designed a web-scraping pipeline using BeautifulSoup to extract, clean, and structure data.
- Hypothesized and evaluated factors influencing food origin using feature engineering and EDA.
- Trained and optimized 3 ML models, identifying dataset bias through performance disparities.

OnWise, Berkeley CalHacks

10/2025

- Developed an app to improve digital media literacy for older adults, identifying misinformation.
- Built a React Native learning interface that simulates real world social media platforms.
- Integrated Bright Data APIs for dynamic web scraping and external fact-checking.
