EDUCATION

Undergraduate of Data Science

University of California, San Diego

San Diego, CA

Expected Grad. - Jun. 2027

EXPERIENCE

Data Science Intern

Naval Surface Warfare Center

Corona, CA

Jun. 2025 - Aug. 2025

- Developed a data-driven project for Southwest Regional Maintenance Center (SWRMC), utilizing data analysis, visualization, and presentation skills on Tableau and SQL
- Analyzed complex issues relating to ship maintenance delay at the SWRMC by curating and ingesting raw operational data on Tableau Prep that included 500+ different ship maintenance periods
- Collaborated with a team in a fast-paced office environment, delivering weekly presentations to update colleagues on project progress and key initiatives

PROJECTS

Shipbuilding Budget Analysis with SQL and Tableau

Jun. 2025 - Aug. 2025

- Developed an end-to-end data analysis project for leadership, leveraging SQL and Tableau to analyze shipbuilding budget data for 10,000+ different ship systems, identify key cost drivers, and create actionable insights for improved resource allocation and budget forecasting
- Improved stakeholder understanding to budget allocation and spending trends by creating clear, concise, and interactive Tableau dashboards, facilitating more informed decision-making
- Utilized advanced SQL window functions to analyze variance between spend requests and current control, creating a Tableau dashboard with dynamic parameters for system selection

NBA Player Efficiency Prediction (Python, scikit-learn, pandas)

Sep. 2025

- Developed a regression model to predict NBA Player Efficiency Rating (PER) using 2023–24 Basketball-Reference data; achieved $R^2 = 0.92$, $MAE = 1.03$, improving baseline accuracy by 40 percent
- Engineered basketball-specific features such as Efficiency Score, Stocks (steals + blocks), and Versatility Score, and tested hypothesis-driven metrics like Position-Adjusted Production
- Designed a full end-to-end pipeline: data collection, cleaning, feature engineering, model training, evaluation, and discussion of statistical/real-world implications

SWRMC Ship Maintenance Data Visualization Dashboard

Jun. 2025 - Aug. 2025

- Engineered a comprehensive data visualization dashboard that assisted the Southwest Regional Maintenance Center in identifying factors that contribute to ship maintenance delay
- Utilized Tableau Prep and SQL to clean, transform, and analyze large datasets to create insightful visualizations for the dashboard
- Presented interactive data visualization dashboard project to 10+ technical high grades and branch heads using technical documentation and demos

Volunteer Hub

Apr. 2024

- Developed a mobile application in Swift and C++ with the goal of improving community service involvement by connecting volunteers with opportunities through the centralization of dispersed event information
- Oversee the backend development process with four students, designing a strong PostgreSQL database and putting safe user authentication mechanisms in place to provide effective data storage and privacy protection
- Collaborated with front-end developers to incorporate backend systems into the Swift interface, guaranteeing smooth data transfer and improving the app's user experience

TECHNICAL SKILLS

Languages: Python, SQL, C, C++, HTML, CSS, Swift, Java

Developer Tools: Visual Studio, PostgreSQL, Jupyter Notebook, Tableau, Git, VS Code, Anaconda, scikit-learn, matplotlib

Python Libraries: Pandas, Pytorch, NumPy, Matplotlib
