

Sean Harmon

t2harmon@ucsd.edu github.com/ICharmU

I am interested in the mathematics behind machine learning techniques. I prefer learning from first principles approaches to really understand how models and algorithms are developed. My goal is to help others understand and enjoy programming and mathematics by questioning their understanding. I am currently learning spaCy for NLP and PyTorch for creating custom deep learning models.

Skills

Programming

Python, numpy, bs4, regex, JavaScript/html/css, Java

Modeling and Analytics

SQL, Pandas, sklearn, statsmodels, PyTorch, spaCy, R, plotly

Education

B.S. Data Science UC San Diego

(2024-2028)

GPA - 3.86/4.00

Activities:

- Data Science Student Society - Projects Team (StackBot)
- HDSI Industry Mentorship Program
- WIC Programming Competitions - Winter 25 (6/23), Spring 25 (4/21)
- Bouldering

Relevant Coursework:

Practice of Data Science, Statistical Methods, Exploratory Data Analysis,
Probabilistic Modeling, Recommender Systems, Convex Optimization

Experience

UCSD ITS Service Desk Lead Student Technician

(9/2024 - 6/2025)

Tools: ServiceNow, TalkDesk, Confluence, Duo Admin, Cisco ISE, Cisco DNAC, NetMRI, Splunk

- **Assisted 1200+ students and staff with technology related problems via support tickets, phone calls, and walk up appointments**
- **Advised other student technicians on unusual tickets and phone calls**
- Processed campus DMCA violations using Splunk
- Investigated fraudulent Duo reports for account protection
- Received additional troubleshooting and interpersonal training for leadership roles

Projects

US Power Outage Analysis ([github](#))

To learn more about electrical infrastructure I analyzed major power outages from 2000 to 2016. I performed EDA, extracted and engineered features, and predicted outage durations using multiple linear regression and random forests.

Alphabet Inc. Stock Analysis ([pdf](#))

I analyzed Alphabet to understand why its stock was priced with a significantly lower P/E than its peers. Using public financial statements I forecasted Alphabet's value using peer group and historical-based approaches.
