

EDUCATION

UNIVERSITY OF [REDACTED]
Bachelor of Science, Major in Computer Science with a Minor in Statistics

Expected 2027

WORK EXPERIENCE

Founding Engineer

September 2025 – Present

- Built an AI-driven document processing pipeline with modular preprocessing, OCR, and validation stages
- Implemented multi-stage preprocessing and OCR workflows that reduced extraction errors by ~35%
- Designed schema-based data models that reduced manual data cleanup by ~5-8 hours per week
- Conducted 5+ **customer discovery interviews** to validate workflow requirements

Technical Summer Student

May 2025 – September 2025

- Wrote Python scripts to organize and consolidate registry search results, reducing manual data entry time by 6+ hours per week
- Processed 300+ **filings per week**, verifying accuracy across public systems and the internal database
- Added and updated case records in internal database, ensuring data consistency across filings and clients

Data Analyst Intern

May 2024 – September 2024

- Wrote Python scripts to clean, normalize, and consolidate financial and operational datasets from multiple sources
- Automated repetitive data preparation tasks using pandas, NumPy, and Excel, reducing manual research effort by ~6 hours/week
- Ran exploratory analysis scripts to generate summary tables and performance metrics for acquisition screening

Sales Intern/Team Lead

May 2023 – September 2023

- Promoted to team lead after top performance in commission-based door-to-door charity sales
- Trained and supervised new hires, led workshops on sales pitching and closing

PROJECTS

Twitter Database Simulator (Python / SQL)

- Designed and implemented a backend tweet search and retrieval system supporting 1k + **records** and concurrent queries
- Built a MongoDB backed data layer managing ~50k **tweet and user records**
- Implemented indexing strategies that reduced query latency from ~500 ms to ~120ms

Stock Predictor (Python/ pandas / NumPy)

- Deployed a Flask-based web application with REST endpoints to serve model predictions with <200 ms average response time
- Designed and trained an LSTM-based time-series model that improved directional prediction accuracy from 52% to 61% over baseline
- Engineered financial features that reduced validation loss by ~22% compared to raw price inputs

Hotel Pricing Strategy Simulator (Python / pandas / Jupyter)

- Contributed to a pricing workflow converting hotel booking lead-time data into segmented **ADR and factor-based pricing curves**
- Implemented scenario analysis outputs translating demand patterns into actionable pricing recommendations across booking windows

TECHNICAL SKILLS

- **Languages:** Python, C, Java, JavaScript, HTML/CSS
- **Frameworks:** Flask, React, LangChain
- **Developer Tools:** Git, Linux, Docker, AWS, Google Cloud Platform, Android Studio
- **ML Tools:** PyTorch, TensorFlow, Scikit-learn
