EDUCATION

University of Waterloo
Bachelor of Computer Science

August 2026
Waterloo, ON

EXPERIENCE

Software Developer Intern

May 2025 – August 2025

Company 1

Toronto, ON

- Implemented serverless data processing for unstructured telehealth data using **AWS Lambda & S3**, enabling on-demand data transformation workflows and reducing clinical report preparation time by **20%**
- Optimized **SQL** queries + indexing, reducing query latency by **40%** across **10k+** appointment records
- Engineered real-time audio validation pipelines using the **Web Audio API** to detect silent streams, cutting failed telehealth session recordings by **30%**
- Implemented a secure identity data flow with **AWS SES, Django** and **React**, safeguarding user credentials

Software Developer Intern

January 2024 – April 2024

Company 2

Waterloo, ON

- Led the development of a dynamic environmental data visualization portal, enabling **200+** users to intuitively explore and interpret complex geospatial data
- Cleaned and preprocessed geospatial datasets using **GeoPandas**, reducing inconsistencies by **20%**
- Engineered a responsive **React** frontend integrated with **Leaflet** maps, reducing interaction latency by **40%**

Software Developer Intern

September 2022 – December 2022

Company 3

Kitchener, ON

- Improved user experience by creating centralized notification settings using **Ruby, Vue, React**, and **TypeScript**
- Efficiently retrieved notification settings by building **REST APIs** using **Active Record** with **Ruby on Rails**
- Enhanced code quality and test coverage by using **Test-Driven Development** with **Jest** and **Ruby**
- Improved accessibility by **25%** by implementing responsive design principles across all devices

Software Developer Intern

January 2022 – April 2022

Company 4

Waterloo, ON

- Simplified information for management by creating a central site with **C#, ASP.NET Core** and **JavaScript**
- Designed a scalable **SQL** interface to filter and retrieve insights from **1M+** records, improving data accessibility
- Optimized **SQL** queries to reduce page load times by **65%**, enhancing performance for large scale enterprise users
- Reduced security vulnerabilities by **60%** through the implementation of a Role-Based Access Control system

PROJECTS

Stock Analytics & Forecasting System | *Python*

- Built and validated **machine learning time-series models** on **20 years of financial data** to forecast market volatility and quantify uncertainty
- Developed an automated **validation pipeline** with **rolling backtests** and multi-period evaluation to ensure robust performance across diverse market conditions
- Created an **LLM-powered** natural language interface with custom tool-calling for explaining indicators, retrieving metrics, and generating visualizations
- Analyzed volatility dynamics to identify **mean-reversion** and shock persistence, informing data-driven risk management decisions

Predicting NBA Awards | *Python*

- Collected and cleaned **20 years** of NBA player and team statistics to build predictive features for award outcomes
- Designed and evaluated a **Logistic Regression** model in **Python** using **30+** player performance features to forecast major NBA award winners, achieving **95%** cross-validated accuracy

TECHNICAL SKILLS

Languages: Python, SQL, R, TypeScript, JavaScript, Ruby, Java, Scala, C, C++, C#

Frameworks/Libraries: Scikit-learn, Pandas, NumPy, Apache Spark, React, Vue, Ruby on Rails, Express, Django

Developer Tools: Git, Postgres, AWS, Docker
