EDUCATION

University

Masters of Science in Computer Science; GPA: 4.0

City, ST
August 2023 – December 2024

University

Bachelors of Science in Computer Science Engineering; GPA: 3.4

City, ST
August 2019 – May 2023

EXPERIENCE

Software Engineer

Small Company

April 2025 – Present

City, ST

- Revamped C# backend services for legal data processing, boosting document generation efficiency by 40%
- Implemented CI/CD pipelines with Azure DevOps, accelerating deployments and software updates
- Built a RAG pipeline to auto generate 20000 legal documents for optimizing attorney processing speed
- Refined API architecture by streamlining RESTful endpoints, enhancing data exchange between systems

Software Engineering Intern

Geoscience Company

May 2024 – August 2024

City, ST

- Elevated geospatial analytics by applying machine learning to analyze 10,000 data points through AutoML
- Improved backend scalability to support 600 clients by optimizing architecture using ArcGIS Enterprise
- Enhanced GIS transactions by utilizing C++ to make REST API calls and ran unit tests for reliability
- Streamlined SDLC process by collaborating with cross-functional teams for optimization during projects

Software Engineering Intern

Car Company

June 2023 – August 2023

City, ST

- Migrated legacy data storage to MongoDB for improved data management for over 10 teams to reduce redundancy
- Utilized natural language processing with OpenAI to uphold nomenclature for 5,000 part details to reduce typos
- Executed Agile practices over 4 sprint cycles by collaborating with senior engineers to refine workflows
- Visualized a clustering algorithm on AWS to analyze spending trends and presented insights using Power BI

Software Engineer Research Assistant

University

June 2022 – May 2023

City, ST

- Developed a series of driving circuits using JavaScript to visualize obstacles required for medical research
- Performed statistical analyses on 2,000+ simulation data points using NumPy to extract actionable insights
- Programmed hardware integration by adapting C code to connect with car systems with interface scripts
- Collaborated with researchers and clinicians to align technical development with medical research needs

Product Development Intern

Car Company

August 2020 – May 2021

City, ST

- Prototyped a predictive solution in Java using decision tree algorithms to identify parking spots for digital nomads
- Networked with over 100 individuals in the space of digital nomads to better understand customer needs
- Published insights from consumers to data engineers to find trends within the space for further investigation
- Presented a phase 1 minimum value proposition to company executives and innovation directors for evaluation

PROJECTS AND LEADERSHIP

Teaching Assistant | Python, Java, Git

May 2024 – August 2024

- Worked with professors and TAs to develop course material for students in data structures and algorithms

Spotify Playlist Project | Python, Flask, React, RESTful API, Docker

January 2023 – May 2023

- Implemented authentication system to get data from user's Spotify account to create a playlist based on one song

Software Engineering Club Vice President | Python, Java, Git

August 2021 – May 2022

- Managed multiple student projects involving 50 participants to enhance software skills and foster innovation

TECHNICAL SKILLS

Languages: Java, Python, SQL (Postgres), JavaScript, C, C++

Frameworks: React, Node.js, Flask, JUnit, FastAPI

Developer Tools: Git, Docker, Visual Studio, PyCharm, Eclipse, Agile, Word, PowerPoint, Excel

Libraries: Pandas, NumPy, Matplotlib, OpenCV, OpenAI, TensorFlow, PyTorch
