

TECHNICAL SKILLS

Languages: Java • JavaScript • TypeScript • Bash/Shell • Dart • Python • C, C++ • SQL • GraphQL

Frameworks: React • React Native • Redux • Ruby on Rails • Flutter • Vue JS • JUnit • Jest • Mocha

Tools: AWS • Docker • Kubernetes • Github Actions • Jenkins • Datadog • MongoDB Atlas • Postman • Android Studio

WORK EXPERIENCE

System Development Engineer – Amazon, Location

Jul. 2025 – Jan 2026

- Productized an internal Java recovery tool deployed on ECS Fargate, utilizing DynamoDB for real-time progress tracking to enable 1300+ Fulfillment Centers globally to self-serve without engineer intervention.
- Developed a Java API adaptor to map payloads to domain objects, implementing granular cross-role IAM policies and RBAC to authorize service requests in adherence with least-privilege standards.
- Exposed critical scaling flaws by stress testing 6 critical services on live traffic, revealing 5xx errors at 40% CPU (vs. 80% threshold) and proving the need for multi-metric scaling to address non-CPU bottlenecks.
- Triaged high-severity incidents by auditing pipelines, logs, metrics to deliver Root Cause Analyses (RCAs) for complex outages, and rapidly resolved recurring tickets to minimize operational noise.

Site Reliability Engineer (Co-op) – Company, Location

Sep. 2023 – Jan. 2024

- Streamlined Beta testing workflows for 300+ developers by upgrading a Ruby on Rails tool to display commit hashes and live deployment status, eliminating version confusion.
- Uncovered severe overprovisioning (5-15% utilization) by auditing Kubernetes (Terraform IaC) limits and building Datadog dashboards to correlate provisioned capacity against actual client traffic patterns.
- Developed a custom Docker comparison process in the absence of industry standard, building developer utilities and documentation to standardize image validation for future refactors.
- Migrated build process for 15+ Docker images from Packer/Ansible to native Dockerfiles/Docker Compose, delivering 15+ images with identical functionality and performance.

Software Developer (Co-op) – Company, Location

Jan. 2023 – Apr. 2023

- Developed new features and resolved bugs for large-scale SaaS web and mobile applications using React, React Native, and TypeScript, ensuring seamless cross-platform user experience and optimal performance.
- Swiftly resolved production bugs in collaboration with cross-functional teams, including engineering, product owners, and senior managers, restoring core app features that had impacted 750,000+ users within 1 day (3x faster than SLA).
- Streamlined DevOps' content update process using Postman APIs, reducing complicated 10min procedure to 30secs.

Full Stack Software Developer Intern – Company, Location

May 2022 – Sept. 2022

- Designed and implemented application integrations, backend features, and RESTful APIs on serverless architecture using AWS services like API Gateway, Lambda, EventBridge, Secrets Manager, SES, S3, and DynamoDB.
- Engineered a backend service syncing products via Shopify GraphQL API to Google and Facebook Ads, automating daily inventory updates to drive 100k+ website visits across North America.
- Led initiative to create unit tests and process documentation on existing codebase using Jest and Mocha, revealing 20+ bugs and handling 100% of the edge cases during deployment pipelines.
- Expanded website UI using VueJS, TypeScript, Prismic CMS, and AWS services to fetch media and product metadata.

PROJECTS

Go Ride Share | Flutter mobile, C#, .NET, Azure Functions, MySQL, MongoDB, GitHub Actions CI/CD, Google Maps API

- Initialized cross-platform Flutter app with scalable MVC architecture, implementing authentication, user detail caching, and auth token management to ensure secure API access and efficient data handling across pages.
- Set up and optimized serverless MongoDB instance with an efficient API using Azure Functions for user chat data, and integrated tests into CI/CD pipelines to achieve 100% branch coverage and improved deployment reliability.

EDUCATION

Bachelor of Science, Redacted Major (Co-op option), My University

Mon. YYYY – Mon. 2025

Minors: Minor1, Minor2
