

EDUCATION

GPA: 3.76 - Bachelor of Science in Computer Science | Minor in Economics

Expected May 2028

- **Coursework:** Full-Stack Javascript, Data Structures (Java), Intermediate Programming (C++), Intro Algorithms, Computer System Fundamentals
- **Clubs & Leadership:** **club** Exec Member **club** Treasure

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C++, SQL, HTML/CSS

Frameworks/Libraries: React, React Native, Node.JS, Express, PyTorch, Pandas, Numpy

Developer Tools and Methodologies: Git, Linux, Docker, CI/CD, OOP

Databases and Platforms: Amazon Web Services (AWS), PostgreSQL, MongoDB

RELEVANT EXPERIENCE

Research Intern

Jan. 2025 – June 2025

- Automated quality control for 4,500+ image segmentations by building and deploying an AI PyTorch model with ResNet50 transfer learning on **AWS (S3/EC2)**, improving validation accuracy from **76% to 91%** and reducing manual review time by **10+ hours/week**.
- Implemented an automated data augmentation pipeline using noise injection and **Python (PyVista/NumPy)** to generate **2,000+ synthetic training samples**, expanding limited medical imaging dataset by **5 times**.

Full-Stack Software Engineering Lead

Jan. 2025 – Present

- Led 7-person **Agile** team through sprint planning and code reviews, creating a full-stack membership portal (React, TypeScript, Node.js) with **JWT** authentication, **Redis** caching, and **RBAC** for **100+ members**.
- Architected backend with **PostgreSQL** and **RESTful APIs**, implementing admin dashboard with **CRUD** operations and bulk CSV attendance uploads, increasing administrative efficiency by over **60%**.
- Created **GitHub Actions & Vercel CI/CD** pipeline with unit testing, catching errors before review and eliminating manual style checks.

PROJECTS

Hackathon Winner | [Devpost](#) | *React, Express, JavaScript, Node.js, PostgreSQL, Groq, Google Vision*

- **Won First Place** out of **270+ participants** at **Hacks 2025** by developing an **AI-powered** sustainability platform, presented to judges from Meta, Netflix, and Amazon.
- Engineered an AI product analysis pipeline using **Groq LLM**, web-scraping, and **Google Vision AI** to analyze product images, providing users with detailed environmental impact scores for sustainable shopping decisions.

Website | *React, TypeScript, Node.js, Express, PostgreSQL, SQL, Supabase*

- Developed a full-stack social media application for **160+ users**, implementing **OAuth authentication**, moderation, and real-time interactions deployed with **Vercel**.
- Designed **RESTful API** with 25 endpoints and **PostgreSQL** schema to handle posts, nested comments, communities, and **WebSocket**-based live messaging.

Github | *React Native, TypeScript, Node.js, Teller, Express, Groq API, PostgreSQL, SQL, Supabase*

- Built a full-stack personal finance app with AI-powered budgeting and bank integration, serving **30 beta users**.
- Created an **AI chatbot** using **Groq LLM** to analyze **1,100 + transactions** and deliver personalized budgeting recommendations.
- Secured bank integration with **Teller API**, enabling encrypted data storage and account syncing across **7K** banks.

NBA MVP Predictor | [Github](#) | *Python, scikit-learn, Pandas, Selenium*

- Engineered an end-to-end ML pipeline by scraping and cleaning 20+ years of NBA data (Selenium/Pandas) to train a model that predicts MVP candidates with **0.81 Average Precision**.
