EDUCATION

Engineering College

Bachelor of Engineering in Computer Science

August 2019 - May 2023

Mumbai, India

- Relevant Coursework: Database Management, Operating Systems, Computer Networks, Data Structures, Algorithms, Deep Learning, Natural Language Processing

EXPERIENCE

CompanyA

Assistant Manager

September 2025 – Present

Mumbai, India

- Implementing a **.NET** Drop Copy system for **NSE** order and trade data, focused on reliable ingestion of multi-partition live feeds and structured persistence for downstream use.
- Spearheaded the migration of 300+ APIs from **Azure APIM** to on-prem **Kong gateway**, handling 100 million requests daily, reducing cloud costs by 50%, and implementing custom **Lua** plugins for enhanced security and rate limiting
- Led platform-level reliability initiatives on the **Kong API Gateway**, implementing disaster recovery and eliminating single points of failure by decoupling gateway instances from a shared database to improve system stability under high-volume production traffic.
- Designed and implemented a performance optimized logging system using **ClickHouse** and **Grafana**, processing **over 10 million logs daily**, reducing issue detection time by **50%** and enabling real-time monitoring of system health
- Awarded a Certificate of Appreciation for outstanding contributions and performance during FY25–26.

CompanyA

Software Developer

June 2023 – August 2025

Mumbai, India

- Developed high-performance **REST APIs** and **WebSocket** services in **.NET** on Azure, reducing API latency by **75%** through **Redis cache** and binary search indexing, replacing third-party dependencies for real-time trading insights
- Automated cache warm-up with **Python** to simulate user traffic before peak hours, cutting initial API latency by **80%** and ensuring consistent low-latency responses
- Accelerated SQL job execution from 2 minutes to 12 seconds by isolating daily-modified data, increasing data retention from 5 to 20 years
- Built a **WebSocket** service in **Golang** to ingest NSE multicast feeds, decode binary packets, and stream normalized data to Redis with concurrent worker pools and backpressure management for sub-millisecond downstream latency

PROJECTS

Devghost | Spring boot, Java, Python, PostgreSQL

March 2024

- Built a full-stack productivity tool to instantly log and retrieve developer notes, debug context, and scratchpad thoughts via a custom Python CLI
- Engineered a modular **Spring Boot** API with soft deletes, tagging, and UUID support, backed by **PostgreSQL**
- Implemented seamless CLI-to-API communication, enabling zero-friction journaling and boosting context recall for developers
- Deployed with a local-first and self-hostable architecture to ensure fast, private, and offline-first usage without relying on cloud infra

SKILLS

Languages: C#, Python, Go, Java, SQL, Lua, JavaScript

Backend & Data: .NET Core, Spring Boot, Flask, Redis

Databases: SQL Server, ClickHouse, PostgreSQL

Cloud & Platform: Azure (App Services, Functions, Event Hub), Kong API Gateway

Tooling: Git, Grafana, Postman, SSMS
