PROFESSIONAL SUMMARY

Results-oriented Software Engineer with a Master’s in Computer Science and strong expertise in .NET Core, Java, and Cloud-native architectures (Azure/Kubernetes). Proven track record of automating enterprise financial workflows, optimizing backend systems, and implementing robust CI/CD pipelines. Passionate about building scalable, reliable software solutions.

EDUCATION

University Name	City, State
Master of Science in Computer Science	May 2024 — GPA: 4.0
University Name	City, State
Bachelor of Science in Computer Science	May 2023 — GPA: 4.0

EXPERIENCE

Software Engineer	July 2024 – Present
Company Name	City, State
- Design and maintain scalable backend services using C# and .NET Core, facilitating the automation of enterprise workflows. - Modernize legacy logic by migrating to an Azure-based architecture, reducing processing latency and improving system reliability. - Orchestrate CI/CD pipelines using Kubernetes, OpenShift, and Harness, ensuring consistent deployments across environments. - Optimize complex SQL queries and stored procedures, significantly reducing database load and manual intervention requirements.	
Software Engineering Intern	June 2022 – Aug. 2022, June 2023 – Aug. 2023
Company Name	City, State
- Architected a C#/.NET automation tool for process verification, reducing manual effort by 80%. - Constructed full-stack features for internal portals using React and Microfrontend architectures. - Designed and implemented Selenium test suites to validate UI components, increasing code coverage and reducing regression bugs. - Participated in Agile ceremonies including daily standups and sprint planning, collaborating with senior engineers to deliver features on schedule.	

KEY PROFESSIONAL PROJECTS

Automation System for Statements | *C#, .NET, Azure, SQL*

- Engineered backend components to automatically generate customer statements for thousands of accounts.
- Implemented BDD-based automation test suites using **Selenium and SpecFlow** to validate accuracy across diverse products.
- Integrated automated regression testing into Azure DevOps pipelines, reducing release cycle time.

Valuation Console App | *C#, REST APIs, Kubernetes*

- Developed a high-performance console application to synchronize valuations via external APIs.
- Ensured real-time data accuracy between internal systems and external vendors through robust error handling and validation logic.
- Containerized the application using **Docker** and deployed via **Harness** for streamlined operations.

TECHNICAL SKILLS

Languages: Java, C#, Python, C++, JavaScript, TypeScript, SQL
Frameworks: .NET Core, Spring Boot, React, Node.js, Express.js, Selenium
Cloud / DevOps: Azure, AWS, Kubernetes, OpenShift, Docker, CI/CD (Harness, Azure DevOps), Git
Databases: SQL Server, PostgreSQL, MySQL, MongoDB
Certifications: Oracle Certified Associate (OCA), Microsoft Azure Fundamentals (AZ-900)
