EDUCATION

University of California, Santa Barbara

Expected June 2027

B.S. in Computer Science

Santa Barbara, CA

- **Relevant Coursework:** Operating Systems, Data Structures and Algorithms, Database Design/Implementation, Networks, Computer Architecture, Distributed Systems, Object Oriented Programming, App Development

EXPERIENCE

Nutanix

June 2025 - Sept 2025

Software Engineer Intern - Some Product

San Jose, CA

- Implemented a data pipeline for on-premises file auditing using Go, NATS JetStream, and Snowflake
- Built event-driven microservices in Go to process file server logs, improving audit reliability across deployments
- Scaled scanner throughput 12x to 1.2M+ events/min by leveraging Go concurrency for high-volume processing
- Developed REST APIs to automate file server onboarding, reducing manual provisioning effort across engineering teams

META Lab

Sept 2024 - Feb 2025

Software Engineer Intern

Santa Barbara, CA

- Developed React and TypeScript analytics tool to track UI feature usage, logging 80K+ user interactions in PostgreSQL to inform redesigns and reduce user-reported bugs by 25%
- Integrated AWS S3 for scalable media storage, creating secure upload/download endpoints in TypeScript for user assets
- Refactored 30+ React components and added input validation based on A/B tests to improve UI reliability and edge cases

Smart Mate

June 2024 - Sept 2024

Backend Engineer Intern

Remote

- Optimized Python backend system for a messaging service, reducing API response time by 40% using MongoDB and Redis
- Built asynchronous video processing service using Apache Kafka and AWS to enhance reliability of video features
- Improved web client security and efficiency by implementing user authentication, web token management, and optimizing MongoDB queries over HTTP/HTTPS in backend

Alan AI

June 2021 - Sept 2021

Software Engineer Intern

Sunnyvale, CA

- Developed a React application integrating Alan AI's speech-to-text API, enabling voice interaction capabilities
- Wrote Jest-based unit and integration tests, resolving API issues to improve React app stability and performance

PROJECTS

SwingSense

- Built golf swing analysis tool using Python and OpenCV video processing to extract biomechanical metrics (swing tempo, hip rotation, spine angle) and provide feedback
- Tested with 3 amateur golfers, demonstrating 20-40% improvement in swing consistency metrics after 1 month of feedback-driven practice

Discountly

- Developed Python-based monitoring application utilizing web APIs and web scraping to alert fashion enthusiasts about price drops from retailers
- Hosted service on Docker to manage scheduled price checks efficiently, reducing unnecessary API calls and providing a budget-friendly shopping tool

TECHNICAL SKILLS

Languages: Go, Python, C/C++, SQL, JavaScript, TypeScript

Frameworks/Libraries: Node, MongoDB, Express, React, Flask, Selenium, OpenCV, FastAPI

Tools: Git, Jenkins, Jira, AWS, Snowflake, Prometheus, Linux, Docker, REST API, Vercel

Concepts: Backend Development, Software Engineering, Networking, CI/CD, Microservices, Agile
